this is a textbook designed for undergraduate and graduate students and is the result of the author's more than twenty years of involvement with econometrics as both teacher and researcher it contains theory problems and answers many of which have already been tested extensively in classrooms and tutorials and then refined for the book it includes the following topics single equation regressions dummy and limited dependent variable models simultaneous equations models dynamic regression models unit roots cointegration and error correction models aggregation over time issues forecasting and panel data models the book does not attempt to duplicate the many standard econometrics books rather it supplements them by focusing exclusively on theoretical and empirical exercises in a systematic way although much of the material has a caribbean flavour its rigorous and clear presentation will appeal to students and teachers worldwide

this book presents the econometric analysis of single equation and simultaneous equation models in which the jointly dependent variables can be continuous categorical or truncated despite the traditional emphasis on continuous variables in econometrics many of the economic variables encountered in practice are categorical those for which a suitable category can be found but where no actual measurement exists or truncated those that can be observed only in certain ranges such variables are involved for example in models of occupational choice choice of tenure in housing and choice of type of schooling models with regulated prices and rationing and models for program evaluation also represent areas of application for the techniques presented by the author

this work is an accessible examination of the nature of various estimation methods written for those who have limited knowledge of economic theory some of the relatively simple methods can be implemented by using existing software packages it reviews the walrasian general equilibrium theory compares the two genuine alternative frameworks for analyzing economic phenomena and aids in establishing a necessary methodological consistency between analytical philosophy and the estimation methods in applied work on disequilibrium economics
