preface introducing hands building hands energizing hands willing hands seeing hands hearing hands feeling hands joining hands extending hands notes references index

the dominance of vision is so strong in sighted people that touch is sometimes considered as a minor perceptual modality however touch is a powerful tool which contributes significantly to our knowledge of space and objects its intensive use by blind persons allows them to reach the same levels of knowledge and cognition as their sighted peers in this book specialized researchers present the recent state of knowledge about the cognitive functioning of touch after an analysis of the neurophysiology and neuropsychology of touch exploratory manual behaviors intramodal haptic tactual kinesthetic abilities and cross modal visual tactual coordination are examined in infants children and adults and in non human primates these studies concern both sighted and blind persons in order to know whether early visual deprivation modifies the modes of processing space and objects the last section is devoted to the technical devices favoring the school and social integration of the young blind braille reading use of raised maps and drawings sensory substitution displays and new technologies of communication adapted for the blind series b

each chapter will begin with five concept maps per chapter to help students outline major concepts and provide a visual overview of

the relationships between concepts for example what are the processes involved in storing information in long term memory these maps will be designed to allow for active review and rehearsal by the student and it will call upon them to apply the concepts to their own lives coglab s online manual will be specific to goldstein and organized in the ordering of goldstein s chapters each experiment will provide a setup for the experiment instructions on what to do to participate in the experiment and there will be specific review questions at a basic advanced level together with more advanced discussion questions that are tailored specifically to goldstein s book

the third edition of the lab manual for psychological research presents students with multiple opportunities to test their knowledge of the concepts they have learned in a research methods course the manual contains exercises that connect to specific concepts in the course exercises geared toward the development of a research project apa style exercises that become progressively more complex and instruction on how to avoid plagiarism packed full of useful exercises checklists and how to sections this robust lab manual gives students hands on guidance and practice conducting their own psychological research projects

originally published in 1976 this is volume 4 of a series that reflected the current state of the field at the time in this title the focus shifts to modern developments in cognitive psychology the emphasis is primarily on attention and short term memory as these concepts came to be understood in the decade leading up to publication in addition to presenting the major concepts the authors outline fundamental theories and methods all in a way that will be readable by anyone with a reasonable scientific background as the

editor notes in the foreword each author has taken on the assignment of giving explicit attention to the orienting attitudes and long term goals that tend to shape the overall course of research in his field and to bring out both actual and potential influences and implications with respect to other aspects of the discipline this volume as all volumes of the handbook will be invaluable for those who want an organized picture of the current state of the field as it was at the time
