herrnstein murray s the bell curve is a deeply controversial text that raises serious issues about the stakes involved in reasoning and interpretation the authors central contention is that intelligence is the primary factor determining social outcomes for individuals and that it is a better predictor of achievement than income background or socioeconomic status one of the major issues raised by the book was its discussion of racial differences in intelligence and its contention that there is a link between the low observed test scores and social outcomes for african americans and their lack of social attainment while the authors produce and interpret a great deal of data to back up their contentions they ultimately fail to tackle the problem that neither intelligence nor race have widely accepted definitions in biology anthropology or sociology in consequence the book it has been termed both racist and pseudoscientific thanks to what its critics see as both its faulty reasoning and its uncautious interpretation of evidence the debate continues to this day with academics on both sides engaged in fierce arguments over what can be argued from the data that herrnstein and murray used

when it was published in 2008 richard thaler and cass sunstein s nudge improving decisions about health wealth and happiness quickly became one of the most influential books in modern economics and politics within a short time it had inspired whole government departments in the us and uk and others as far afield as singapore one of the keys to nudge s

success is thaler and sunstein's ability to create a detailed and persuasive case for their take on economic decision making. nudge is not a book packed with original findings or data; instead, it is a careful and systematic synthesis of decades of research into behavioral economics. the discipline challenges much conventional economic thought which works on the basis that overall humans make rational decisions by focusing instead on the irrational cognitive biases that affect our decision making. these seemingly in-built biases mean that certain kinds of economic decision making are predictably irrational. thaler and sunstein prove themselves experts at creating persuasive arguments and dealing effectively with counter arguments. they conclude that if governments understand these cognitive biases, they can nudge us into making better decisions for ourselves. entertaining as well as smart, nudge shows the full range of reasoning skills that go into making a persuasive argument.

richard evans wrote in defence of history at a time when the historian's profession was coming under heavy attack as a result of the cultural turn taken by the discipline during the late 1980s and the 1990s. historians were being forced to face up to postmodern thinking which argued that because all texts were the product of biased writers who had incomplete information, none could be privileged above others. in this reading, there could be no objective history; merely the study of the texts themselves. while in defence of history addresses all aspects of historical method, its key focus is on an extensive evaluation of this postmodern thinking. evans judges the acceptability of the reasoning advanced by the postmodernists and finds it badly wanting. he is strongly critical both of the relevance and of the adequacy of their arguments, seeking to show that ultimately they are guilty of failing to accept the logic of their own position: all texts are equally valid or invalid. they suggest, while insisting that the products of their own school are in fact more true than those of their opponents, evans concludes by pointing out that this same argument could be advanced to suggest that the works of holocaust deniers are just as valid as are those of historians who accept that the nazis set out to commit genocide. so why he demands is no postmodernist willing to say as much a devastating example of the usefulness of relentless evaluation.
