obesity is officially recognised as a major worldwide public health problem progress in obesity research 9 fulfils the need for an accessible and fundamental research recommended towards a better understanding of obesity it will prove an indispensable

resource for all those involved in the research prevention and treatment of obesity

this paper presents an efficient asynchronous protocol to compute rsa inverses with respect to a public rsa modulus  $n$  whose factorization is secret and shared among a group of parties given two numbers  $x$  and  $e$  the protocol computes  $y$  such that  $ye \equiv x \pmod{n}$  a synchronous protocol for this task has been presented by catalano gennaro and halevi eurocrypt 2000 but the standard approach for turning this into an asynchronous protocol would require a byzantine agreement sub protocol our protocol adopts their approach but exploits a feature of the problem in order to avoid the use of a byzantine agreement primitive hence it leads to efficient asynchronous protocols for threshold signatures and for byzantine agreement based on the strong rsa assumption without the use of random oracles
