vibrations are a part of our environment and daily life many of them are useful and are needed for many purposes one of the best example being the hearing system nevertheless vibrations are often undesirable and have to be suppressed or reduced as they may be harmful to structures by generating damages or compromise the comfort of users through noise generation of mechanical wave transmission to the body the purpose of this book is to present basic and advanced methods for efficiently controlling the vibrations and limiting their effects open access publishing is an extraordinary opportunity for a wide dissemination of high quality research this book is not an exception to this and i am proud to introduce the works performed by experts from all over the world
