this introductory textbook for standard undergraduate courses in thermodynamics has been completely rewritten to explore a greater number of topics more clearly and concisely starting with an overview of important quantum behaviours the book teaches students how to calculate probabilities in order to provide a firm foundation for later chapters it introduces the ideas of classical thermodynamics and explores them both in general and as they are applied to specific processes and interactions the remainder of

the book deals with statistical mechanics each topic ends with a boxed summary of ideas and results and every chapter contains numerous homework problems covering a broad range of difficulties answers are given to odd numbered problems and solutions to even numbered problems are available to instructors at cambridge org 9781107694927

this textbook presents the classical topics of conduction heat transfer and extends the coverage to include chapters on perturbation methods heat transfer in living tissue and microscale conduction this makes the book unique among the many published textbook on conduction heat transfer other noteworthy features of the book are the material is organized to provide students with the tools to model analyze and solve a wide range of engineering applications involving conduction heat transfer mathematical techniques are presented in a clear and simplified fashion to be used as instruments in obtaining solutions the simplicity of one dimensional conduction is used to drill students in the role of boundary conditions and to explore a variety of physical conditions that are of practical interest examples are carefully selected to illustrate the application of principles and the construction of solutions students are trained to follow a systematic problem solving methodology with emphasis on thought process logic reasoning and verification solutions to all examples and end of chapter problems follow an orderly problems solving approach extensive training material is available on the web the author provides an extensive solution manual for verifiable course instructors on request please send your request to heattextbook@gmail.com

led lighting is a self contained and introductory level book featuring a blend of theory and applications that thoroughly covers this important interdisciplinary area building on the

underlying fields of optics photonics and vision science it comprises four parts part i is devoted to fundamentals the behavior of light is described in terms of rays waves and photons each of these approaches is best suited to a particular set of applications the properties of blackbody radiation thermal light and incandescent light are derived and explained the essentials of semiconductor physics are set forth including the operation of junctions and heterojunctions quantum wells and quantum dots and organic and perovskite semiconductors part ii deals with the generation of light in semiconductors and details the operation and properties of iii v semiconductor devices mqwleds microleds quantum dot devices qleds wqleds organic semiconductor devices oleds smoleds pleds woleds and perovskite devices peleds ppeleds qpeleds pewleds part iii focuses on vision and the perception of color as well as on colorimetry it delineates radiometric and photometric quantities as well as various measures of luminous efficacy and efficiency it also elucidates the significance of commonly used led lighting metrics such as the color rendering index cri color temperature ct correlated color temperature cct and chromaticity diagram part iv is devoted to led lighting focusing on its history and salutary features and on how this modern form of illumination is deployed it describes the principal components used in led lighting including phosphor conversion leds pcleds for generating cool and warm white light chip on board cob devices color mixing leds led filaments retrofit led lamps hybrid devices led luminaires and oled light panels it concludes with a discussion of smart and connected lighting that reviews plant centric lighting and highlights the roles of gamma and circadian brain rhythms in human centric lighting finally the performance metrics for traditional and led light sources are summarized each chapter contains practical examples highlighted equations color coded figures and an extensive bibliography

numerous design oriented end of chapter problems also provide realistic settings for application of the material discussed

the job interview is probably the most important step you will take in your job search journey because it's always important to be prepared to respond effectively to the questions that employers typically ask at a job interview petrogav international has prepared this ebooks that will help you to get a job in oil and gas industry since these questions are so common hiring managers will expect you to be able to answer them smoothly and without hesitation this ebook contains 200 questions and answers for job interview and as a bonus web addresses to 309 video movies for a better understanding of the technological process this course covers aspects like hse process mechanical electrical and instrumentation control that will enable you to apply for any position in the oil and gas industry
