statistical methods of discrimination and classification advances in theory and applications is a collection of papers that tackles the multivariate problems of discriminating and classifying subjects into exclusive population the book presents 13 papers that cover that advancement in the statistical procedure of discriminating and classifying the studies in the text primarily focus on various methods of discriminating and classifying variables such as multiple discriminant analysis in the presence of mixed continuous and categorical data choice of the smoothing parameter and efficiency of k nearest neighbor classification and assessing the performance of an allocation rule the book will be of great use to researchers and practitioners of wide array of scientific disciplines including

engineering psychology biology and physics

this book is based on the papers presented at the international conference quality improvement through statistical methods in cochin india during december 28 31 1996 the conference was hosted by the cochin university of science and technology cochin india and sponsored by the institute for improvement in quality and productivity iiqp at the university of waterloo canada the statistics in industry committee of the international statistical institute Isi and by the indian statistical institute there has been an increased interest in quality improvement qi activities in many organizations during the last several years since the airing of the nbc television program if japan can why can't we implementation of qi methods requires statistical thinking and the utilization of statistical tools thus there has been a renewed interest in statistical methods applicable to industry and technology this revitalized enthusiasm has created worldwide discussions on industrial statistics research and qi ideas at several international conferences in recent years the purpose of this conference was to provide a forum for presenting and exchanging ideas in statistical methods and for enhancing the transference of such technologies to quality improvement efforts in various sectors it also provided an opportunity for interaction between industrial practitioners and academia it was intended that the exchange of experiences and ideas would foster new international collaborations in research and other technology transfers

statistical practices have recently been questioned by numerous independent authors to the extent that a significant fraction of accepted research findings can be questioned this suggests that statistical methodologies may have gone too far into an engineering practice with minimal concern for their foundation interpretation assumptions and limitations which may be jeopardized in the current context disguised by overwhelming data sets advanced processing and stunning presentations the basic approach is often intractable to anyone but the analyst the hierarchical nature of statistical inference exemplified by bayesian aggregation of prior and derived knowledge may also be challenging conceptual simplified studies of the kind presented in this book could therefore provide valuable guidance when developing statistical methodologies but also applying state of the art with greater confidence

inspired by the encyclopedia of statistical sciences second edition this volume outlines the statistical tools for successfully working with modern life and health sciences research data collection holds an essential part in dictating the future of health sciences and public health as the compilation of statistics allows researchers and medical practitioners to monitor trends in health status identify health problems and evaluate the impact of health policies and programs methods and applications of statistics in the life and health sciences serves as a single one of a kind resource on the wide range of statistical methods techniques and applications that are applied in modern life and health sciences in research specially designed to present encyclopedic content in an accessible and self contained format this book outlines thorough coverage of the underlying theory and standard applications to research in related disciplines such as biology epidemiology clinical trials and public health uniquely combining established literature with cutting edge research this book contains classical works and more than twenty five new articles and completely revised contributions from the acclaimed encyclopedia of statistical sciences second edition the result is a compilation of more than eighty articles that explores classic methodology and new topics including sequential methods in biomedical research statistical measures of human quality of life change point methods in genetics sample size determination for clinical trials mixed effects regression models for predicting pre clinical disease probabilistic and statistical models for conception statistical methods are explored and applied to population growth disease detection and treatment genetic and genomic research drug development clinical trials screening and prevention and the assessment of rehabilitation recovery and quality of life these topics are explored in contributions written by more than 100 leading academics researchers and practitioners who utilize various statistical practices such as election bias survival analysis missing data techniques and cluster analysis for handling the wide array of modern issues in the life and health sciences with its combination of traditional methodology and newly developed research methods and applications of statistics in the life and health sciences has everything students academics and researchers in the life and health sciences need to build and apply their knowledge of statistical methods and applications

the text book covers all traditional as well as newly emerging topics in statistical methodology a broad general description of the book consists of i a lucid presentation to the motivation of the modern axiomatic approach to probability ii study of all major distributions inclusive of circular log normal singular with new interpretations of some distributions ex pareto logistic etc iii model oriented approach to the generations of normal log normal cauchy exponential gamma and other waiting distributions and their characterizations iv techniques of truncated and censored distributions vis À vis parametric non parametric bayesian and sequential inference procedures the backgrounds of which have been provided v inclusion of classical topics as pearsonian curves gram charlier series and orthogonal polynomials some of the distinguishing features are as follows introducing the concept of correlation as a milestone in the development of regression theory a large number of solved examples and a wide collection of unsolved problems with occasional hints a geometrical treatment of non central x^2
