energy usage and consumption continue to rise globally each year with the most efficient and cost effective energy sources causing huge impacts to the environment in an effort to mitigate harmful effects to the environment implementing clean energy resources and utilizing green energy management strategies have become worldwide initiatives with many countries from all regions quickly becoming leaders in renewable energy usage still not every energy resource is without flaws researchers must develop effective and low cost strategies for clean energy in order to find the balance between production and consumption the research anthology on clean energy management and solutions provides in depth research that explores strategies and techniques used in the energy production field to optimize energy efficiency in order to maintain clean and safe use while delivering ample energy coverage the anthology also seeks solutions to energy that have not yet been optimized or are still produced in a way that is harmful to the environment covering topics such as hydrogen fuel cells renewable energy solar power solar systems cost savings and climate protection this text is essential for electrical engineers nuclear engineers environmentalists managers policymakers government officials professionals in the energy industry researchers academicians and students looking for the latest research on clean energy management

pitch i e fundamental frequency fo and fundamental period to occupies a key position in the acoustic speech signal the prosodic information of an utterance is predominantly determined by this parameter the ear is more sensitive to changes of fundamental frequency than to changes of other speech signal parameters by an order of magnitude the quality of vocoded speech is essentially influenced by the quality and faultlessness of the pitch measure ment hence the importance of this parameter necessitates using good and reliable measurement methods at first

glance the task looks simple one just has to detect the funda mental frequency or period of a quasi periodic signal for a number of reasons however the task of pitch determination has to be counted among the most difficult problems in speech analysis 1 in principle speech is a nonstationary process the momentary position of the vocal tract may change abruptly at any time this leads to drastic variations in the temporal structure of the signal even between subsequent pitch periods and assuming a quasi periodic signal is often far from realistic 2 due to the flexibility of the human vocal tract and the wide variety of voices there exist a multitude of possible temporal structures narrow band formants at low harmonics especially at the second or third harmonic are an additional source of difficulty 3 for an arbitrary speech signal uttered by an unknown speaker the fundamental frequency can vary over a range of almost four octaves 50 to 800 hz
