the second edition of the oxford handbook of personality and social psychology uniquely integrates personality and social psychology perspectives together in one

volume contributors explore historical conceptual methodological and empirical foundations that link the two fields together further this new edition offers readers comprehensive coverage of new and emerging areas of theory research and application and assesses the fields growth and development since the publication of the first edition

univariate and multivariate multilevel models are used to understand how to design studies and analyze data in this comprehensive text distinguished by its variety of applications from the educational behavioral and social sciences basic and advanced models are developed from the multilevel regression mlm and latent variable sem traditions within one unified analytic framework for investigating hierarchical data the authors provide examples using each modeling approach and also explore situations where alternative approaches may be more appropriate given the research goals numerous examples and exercises allow readers to test their understanding of the techniques presented changes to the new edition include the use of *mplus 7.2* for running the analyses including the input and data files at routledge.com/9781848725522 expanded discussion of mlm and sem model building that outlines the steps taken in the process the relevant *mplus* syntax and tips on how to evaluate the models expanded pedagogical program now with chapter objectives boldfaced key terms a glossary and more tables and graphs to help students better understand key concepts and techniques numerous varied examples developed throughout which make this book appropriate for use in education psychology business sociology and the health sciences expanded coverage of missing data problems in mlm using *ml* estimation and multiple imputation to provide currently accepted solutions **ch 10** new chapter on three level univariate and multilevel multivariate mlm models provides greater options for investigating more complex theoretical relationships **ch 4** new chapter on mlm and sem models with categorical outcomes facilitates the specification of multilevel models with observed and latent outcomes **ch 8** new chapter on multilevel and longitudinal mixture models provides readers with options for identifying emergent groups in hierarchical data **ch 9** new chapter on the utilization of sample weights power analysis and missing data provides guidance on technical issues of increasing concern for research publication **ch 10** ideal as a text for graduate courses on multilevel longitudinal latent variable modeling multivariate statistics or advanced quantitative techniques taught in psychology business education health and sociology this book s practical approach also appeals to researchers recommended prerequisites are introductory univariate and multivariate statistics

a practical introduction to using *mplus* for the analysis of multivariate data this volume provides step by step guidance complete with real data examples numerous screen shots and output excerpts the author shows how to prepare a data set for import in *mplus* using *spss* he explains how to specify different types of models in *mplus* syntax and address typical caveats for example assessing measurement invariance in longitudinal *sems* coverage includes path and factor analytic models as well as mediational longitudinal multilevel and latent class models specific programming tips and solution strategies are presented in boxes in each chapter the companion website crmda.ku.edu/guilford/geiser features data sets annotated syntax files and output for all of the examples of special utility to instructors and students

many of the examples can be run with the free demo version of `mplus`

multilevel and longitudinal modeling with `ibm spss` third edition demonstrates how to use the multilevel and longitudinal modeling techniques available in `ibm spss` versions 25–27. Annotated screenshots with all relevant output provide readers with a step-by-step understanding of each technique as they are shown how to navigate the program throughout. Diagnostic tools, data management issues, and related graphics are introduced. `spss` commands show the flow of the menu structure and how to facilitate model building while annotated syntax is also available for those who prefer this approach. Extended examples illustrating the logic of model development and evaluation are included throughout the book, demonstrating the context and rationale of the research questions and the steps around which the analyses are structured. The book opens with the conceptual and methodological issues associated with multilevel and longitudinal modeling, followed by a discussion of `spss` data management techniques that facilitate working with multilevel, longitudinal, or cross-classified data sets. The next few chapters introduce the basics of multilevel modeling, developing a multilevel model, extensions of the basic two-level model (e.g., three-level models, models for binary and ordinal outcomes, and troubleshooting techniques for everyday use), programming and modeling problems along with potential solutions, models for investigating individual and organizational change, are next developed, followed by models with multivariate outcomes, and finally models with cross-classified and multiple membership data structures. The book concludes with thoughts about ways to expand on the various multilevel and longitudinal modeling techniques introduced and issues (e.g., missing data, sample weights) to keep in mind in conducting multilevel analyses. Key features of the third edition, thoroughly updated throughout, to reflect `ibm spss` versions 26–27: introduction to fixed effects regression for examining change over time where random effects modeling may not be an optimal choice; additional treatment of key topics specifically aligned with multilevel modeling (e.g., models with binary and ordinal outcomes, expanded coverage of models with cross-classified and multiple membership data structures, added discussion on model checking for improvement (e.g., examining residuals, locating outliers), further discussion of alternatives for dealing with missing data, and the use of sample weights within multilevel data structures); supported by online data sets. The book's practical approach makes it an essential text for graduate-level courses on multilevel, longitudinal, latent variable modeling, multivariate statistics, or advanced quantitative techniques taught in departments of business, education, health, psychology, and sociology. The book will also prove appealing to researchers in these fields. The book is designed to provide an excellent supplement to Heck and Thomas's *An Introduction to Multilevel Modeling Techniques*, fourth edition. However, it can also be used with any multilevel or longitudinal modeling book or as a stand-alone text.
