peer to peer p2p networks are comprised of equal nodes that function as both clients and servers as opposed to systems in which data and information are managed through centralized servers the implications of this architecture go far beyond the technological realm the ability of individuals to share digital content files including audio and video material in real time facilitates communication and at a deeper cultural level promotes community without hierarchy or strict control as eli noam lorenzo pupillo and their colleagues demonstrate in this timely and incisive volume p2p has permeated all facets of society from youtube and music downloading experiments on college campuses to international policy debates over intellectual property rights peer to peer video is the first book to apply economic principles to analyze and understand the p2p phenomenon considering such topics as consumer demand and the commons and file sharing and the copyright crisis moreover the authors who include scholars consultants and industry executives provide numerous contemporary examples from the u s and around the world to shed light on the implications of p2p as a mass medium considering such issues as pricing licensing security and regulation the result is provocative commentary on a slice of popular culture that will interest scholars and students policymakers media industry professionals and general readers alike

just like the industrial society of the last century depended on natural resources today s society depends on information and its exchange staab and stuckenschmidt structured the selected contributions into four parts part i data storage and access prepares the semantic foundation i e data modelling and querying in a flexible and yet scalable manner these foundations allow for dealing with the organization of information at the individual peers part ii querying the network considers the routing of queries as well as continuous queries and personalized queries under the conditions of the permanently changing topological structure of a peer to peer network part iii semantic integration deals with the mapping of heterogeneous data representations finally part iv methodology and systems reports experiences from case studies and sample applications the overall result is a state of the art description of the potential of semantic and peer to peer technologies for information sharing and knowledge management when applied jointly

this lecture introduces systematically into the problem of managing large data collections in peer to peer systems search over large datasets has always been a key problem in peer to peer systems and the peer to peer paradigm has incited novel directions in the field

of data management this resulted in many novel peer to peer data management concepts and algorithms for supporting data management tasks in a wider sense including data integration document management and text retrieval the lecture covers four different types of peer to peer data management systems that are characterized by the type of data they manage and the search capabilities they support the first type are structured peer to peer data management systems which support structured query capabilities for standard data models the second type are peer to peer data integration systems for querying of heterogeneous databases without requiring a common global schema the third type are peer to peer document retrieval systems that enable document search based both on the textual content and the document structure finally we introduce semantic overlay networks which support similarity search on information represented in hierarchically organized and multi dimensional semantic spaces topics that go beyond data representation and search are summarized at the end of the lecture table of contents introduction structured peer to peer databases peer to peer data integration peer to peer retrieval semantic overlay networks conclusion

this book constitutes the thoroughly refereed post proceedings of the first international workshop on databases information systems and peer to peer computing dbisp2p 2003 held in berlin germany in september 2003 as a satellite event of vldb 2003 the 16 revised full papers presented together with the abstract of an invited contribution were carefully selected during two rounds of reviewing and improvement the papers are organized in topical sections on structure in p2p networks semantics and data integration data streams and publish subscribe and data structures and query processing

peer to peer p2p networks enable users to directly share digital content such as audio video and text files as well as real time data such as telephony traffic with other users without depending on a central server although originally popularized by unlicensed online music services such as napster p2p networking has recently emerged as a viable multimillion dollar business model for the distribution of academic and clinical information telecommunications and social networking written at an accessible level for any reader familiar with fundamental internet protocols peer to peer networking and applications explains the conceptual operations and architecture underlying basic p2p systems using well known commercial systems as models the book also delineates the latest research directions thereby providing not only a sophisticated understanding of current systems but also the means to improve upon these systems with innovations that will better performance security and flexibility peer to peer networking and applications is thus both a valuable starting point and an important reference to those practitioners employed by any of the 200 companies with approximately 400 million invested in this new and lucrative technology uses well known commercial p2p systems as models thus demonstrating real world applicability discusses how current research trends in wireless networking high def content drm etc will intersect with p2p allowing readers to

this book constitutes the refereed proceedings of the first international conference on data management in grid and peer to peer systems globe 2008 held in turin italy in september 2008 p2p and grid computing are important for scale distributed systems and applications that require effective management of voluminous distributed and heterogeneous data the 10 revised full papers presented were carefully reviewed and selected from 23 submissions the papers are organized in topical sections on p2p storage systems and caching p2p data integration systems querying in grid and p2p systems

peer to peer networking is a disruptive technology for large scale distributed applications that has recently gained wide interest due to the successes of peer to peer p2p content sharing media streaming and telephony applications there are a large range of other applications under development or being proposed the underlying architectures share features such as decentralization sharing of end system resources autonomy virtualization and self organization these features constitute the p2p paradigm this handbook broadly addresses a large cross section of current research and state of the art reports on the nature of this paradigm from a large number of experts in the field several trends in information and network technology such as increased performance and deployment of broadband networking wireless networking and mobile devices are synergistic with and reinforcing the capabilities of the p2p paradigm there is general expectation in the technical community that p2p networking will continue to be an important tool for networked applications and impact the evolution of the internet a large amount of research activity has resulted in a relatively short time and a growing community of researchers has developed the handbook of peer to peer networking is dedicated to discussions on p2p networks and their applications this is a comprehensive book on p2p computing

this text demonstrates through clear explanations how to easily leverage the power of peer to peer networks to achieve seamless personal and business communication and transactions

peer to peer p2p computing promises to offer exciting new possibilities in distributed information processing and database technologies the realization of this promise lies fundamentally in the availability of enhanced services such as structured ways for classifying and registering shared information verification and certification of information content distributed schemes and quality of content security features information discovery and accessibility interoperability and composition of active information services and finally market based mechanisms to allow cooperative and non cooperative information exchanges the p2p paradigm lends itself to constructing large scale complex adaptive autonomous and heterogeneous database and information systems endowed with clearly specified and differential capabilities to negotiate bargain coordinate and self organize the information exchanges in large scale networks this vision will have a radical impact on the structure of complex organizations business scientific or otherwise and on the emergence and the formation of social communities and on how the information is organized and processed the p2p information paradigm naturally encompasses static and wireless connectivity and static and mobile architectures wireless connectivity combined with the increasingly small and powerful mobile devices and sensors pose new challenges to as well as opportunities for the database community information becomes ubiquitous highly distributed and accessible anywhere and at any time over highly dynamic unstable networks with very severe constraints on the information management and processing capabilities
