peer to peer p2p networks are comprised of equal nodes that function as both clients and servers as opposed to systems in which data and information are managed through centralized servers the implications of this architecture go far beyond the technological realm the ability of individuals to share digital content files including audio and video material in real time facilitates communication and at a deeper cultural level promotes community without hierarchy or strict control as eli noam lorenzo pupillo and their colleagues demonstrate in this timely and incisive volume p2p has permeated all facets of society from youtube and music downloading experiments on college campuses to international policy debates over intellectual property rights peer to peer video is the first book to apply economic principles to analyze and understand the p2p phenomenon considering such topics as consumer demand and the commons and file sharing and the copyright crisis moreover the authors who include scholars consultants and industry executives provide numerous contemporary examples from the u s and around the world to shed light on the implications of p2p as a mass medium considering such issues as pricing licensing security and regulation the result is provocative commentary on a slice of popular culture that will interest scholars and students policymakers media industry professionals and general readers alike

just like the industrial society of the last century depended on natural resources today s society depends on information and its exchange staab and stuckenschmidt structured the selected contributions into four parts part i data storage and access prepares the semantic foundation i e data modelling and querying in a flexible and yet scalable manner these foundations allow for dealing with the organization of information at the individual peers part ii querying the network considers the routing of queries as well as continuous queries and personalized queries under the conditions of the permanently

changing topological structure of a peer to peer network part iii semantic integration deals with the mapping of heterogeneous data representations finally part iv methodology and systems reports experiences from case studies and sample applications the overall result is a state of the art description of the potential of semantic and peer to peer technologies for information sharing and knowledge management when applied jointly

this lecture introduces systematically into the problem of managing large data collections in peer to peer systems search over large datasets has always been a key problem in peer to peer systems and the peer to peer paradigm has incited novel directions in the field of data management this resulted in many novel peer to peer data management concepts and algorithms for supporting data management tasks in a wider sense including data integration document management and text retrieval the lecture covers four different types of peer to peer data management systems that are characterized by the type of data they manage and the search capabilities they support the first type are structured peer to peer data management systems which support structured query capabilities for standard data models the second type are peer to peer data integration systems for querying of heterogeneous databases without requiring a common global schema the third type are peer to peer document retrieval systems that enable document search based both on the textual content and the document structure finally we introduce semantic overlay networks which support similarity search on information represented in hierarchically organized and multi dimensional semantic spaces topics that go beyond data representation and search are summarized at the end of the lecture table of contents introduction structured peer to peer databases peer to peer data integration peer to peer retrieval semantic overlay networks conclusion
