this successful performance in addition to that reported by other researchers suggests that the kinds of general equilibrium models formulated in practice possess certain favorable computational properties that theoretical analysis has yet to discover

the book includes the author's most important work on a variety of topics including the hotelling model of spatial competition as applied to resource economics jurisdictional tax competition

particularly in the context of resource taxes and environmental regulation both theoretical and empirical

this wide ranging and path breaking collection of essays on china s environmental crisis takes a new approach transcending the typical gloom and doom media and scholarly report on china s environmental crisis to address how the chinese political and social systems were impacted and how they responded or should respond to the ecological challenges confronting china therefore this collection provides innovative analyses about the impacts and responses both domestically and globally of china s political and social systems encompassing its social values ameliorative and preventative policies it leaves us with such an important question to ponder what social action will be needed in the near and long term future in order to avoid environmental disaster as well as to achieve environmental sustainability and social justice for the long term in china

how do environmental regulations pollution abatement and technical change interplay over time how do economic equilibria the innovation of techniques and adjustment affect each other in the short run and over the long term answering those questions is the aim of this study in particular the substitution of techniques and the implementation of new less polluting production processes is studied in some detail for this purpose the analysis combines the austrian view that production and adjustment is a process in time with a conventional equilibrium framework however the focus is not only to provide a theoretical discussion of the intertemporal effects of environmental regulations technological change short run adjustment and long run development the theoretical approach is formulated in terms of a computable equilibrium model which is numerically applied to analyze the economic impact of waste water regulations in western europe as such this study contributes to capital theory environmental economics and computable equilibrium modelling
