in 1991 the federal government initiated the multiagency high performance computing and communications program hpcc to further the development of u s supercomputer technology and high speed computer network technology this overview by the congressional budget office cbo concentrates on obstacles that might prevent the growth of the high performance computing and data communications industries the market for supercomputers relative to that of other technologies is small the main obstacle to

the rise of large commercial markets for hpcc developed technology is that cheaper workstations may preempt further growth of the supercomputer market as a whole in addition an economic inertia may occur as conventional supercomputers working well become difficult to dislodge in the marketplace the national research and educational network nren is central to the hpcc program the ways in which internet is becoming the core of a national data network promise well for hpcc in the future but hpcc technology might be precluded from having a substantial effect on the current markets if demand for high speed communications does not emerge as envisaged by hpcc leaders cost considerations and policy directions for hpcc are discussed five tables six figures and one box illustrate the discussion three appendixes discuss hpcc technology spinoffs and speed calculations sld
