many changes have been made in this edition first to the nomenclature so that the book is in agreement with the
 international system of units s i and secondly to the circuit diagrams so that they conform to b s s 3939 the book has
 been enlarged and now has 546 problems much more emphasis has been given to semiconductor devices and
 transistor circuits additional topics and references for further reading have been introduced some of the original
 problems and solutions have been taken out and several minor modifications and corrections have been made it
 could be argued that thermionic valve circuits should not have been mentioned since valves are no longer
 considered important by most electronic designers except possibly for very high power or voltage applications some
 of the original problems on valves and valve circuits have been retained however for completeness because the
 material is still present in many syllabuses and despite the advent and proliferation of solid state devices in recent
 years the good old fashioned valve looks like being in existence for a long time there are still some topics readers
 may expect to find included which have had to be omitted others have had less space devoted to them than one
 would have liked a new feature of this edition is that some problems with answers given at the end of each chapter
 are left as student exercises so the solutions are not included the author wishes to thank his colleagues professor p n
