this is the first book length treatment of hybrid logic and its proof theory hybrid logic is an extension of ordinary modal logic which allows explicit reference to individual points in a model where the points represent times possible worlds states in a computer or something else this is useful for many applications for example when reasoning about time one often wants to formulate a series of statements about what happens at specific times there is little consensus about proof theory for ordinary modal logic many modal logical proof systems lack important properties and the relationships between proof systems for different modal logics are often unclear in the present book we demonstrate that hybrid logical proof theory remedies these deficiencies by giving a spectrum of well behaved proof systems natural deduction gentzen tableau and axiom systems for a spectrum of different hybrid logics propositional first order intensional first order and intuitionistic

this book delves into the fundamental characteristics measurement techniques modeling methods and theories of wireless channels in mobile scenarios unlike wired communication systems which are more predictable wireless communication systems are significantly affected by radio propagation and wireless channels by investigating the mechanisms of wireless channels and measurement techniques this book aims to better understand wireless communication systems in order to optimize the quality and design of wireless communications the title covers key topics in the field including basic theory of radio wave propagation and non stationary channels theory and method of time varying channel measurement measurement case analysis wireless channel modeling theory and parameter extraction method rail traffic channel measurement and modeling and dynamic modeling and simulation method of time varying channels this book is suitable for researchers and students interested in radio wave propagation wireless channels and mobile communication systems it can also serve as a useful guide for technical professionals who have a background in mobile communication technology

courses in psychological distress and disorders are among the most popular courses in psychology programs and mood and anxiety disorders are among the most prevalent disorders covered in these classes and encountered by mental health professionals although there are books on mood and anxiety disorders on particular aspects of them and on their presentation in specific populations such works do not provide students new to the field with a comprehensive and accessible ready reference for understanding these disorders with respect to their phenomenology etiology and treatment and through an inclusive lens that consistently considers how these symptoms appear and are construed across cultures addressing societal factors such as race culture equity and oppression it is hoped that the sage encyclopedia of mood and anxiety disorders will fill this gap allowing students and other interested readers to become familiar with past and current approaches and theories and to enhance their understanding of the sociocultural factors that affect how we discuss approach and treat these types of psychological distress as such consideration of sociocultural factors will infuse the three volume set the encyclopedia will consist of approximately 450 entries essays arranged alphabetically within three volumes

optical networks are leaving the labs and becoming a reality despite the current crisis of the telecom industry our everyday life increasingly depends on communication networks for information exchange medicine education data transfer commerce and many other endeavours high capacity links are required by the large futemet traffic demand and optical networks remain one of the most promising technologies for meeting these needs wdm systems are today widely deployed thanks to low cost at extreme data rates and high reliability of optical components such as optical amplifiers and fixed tunable filters and transceivers access and metropolitan area networks are increasingly based on optical technologies to overcome the electronic bottleneck at the network edge traditional multi layer architectures such as the widely deployed ip atm sdh protocol stack are increasingly based on wdm transport further efforts are sought to move at the optical layer more of the functionalities available today in higher protocol layers new components and subsystems for very high speed optical networks offer new design opportunities to network operators and designers the trends towards dynamically configurable all optical network infrastructures open up a wide range of new network engineering and design choices which must face issues such as interoperability and unified control and management
