this is the first book of a two volume textbook on real analysis both the volumes analysis i and analysis ii are intended for honors undergraduates who have already been exposed to calculus the emphasis is on rigor and foundations the material starts at the very beginning the construction of number systems and set theory

analysis i chaps 1 5 then on to the basics of analysis such as limits series continuity differentiation and riemann integration analysis i chaps 6 11 on euclidean spaces and analysis ii chaps 1 3 on metric spaces through power series several variable calculus and fourier analysis analysis ii chaps 4 6 and finally to the lebesgue integral analysis ii chaps 7 8 there are appendices on mathematical logic and the decimal system the entire text omitting some less central topics is in two quarters of twenty five to thirty lectures each

in elementary introductions to mathematical analysis the treatment of the logical and algebraic foundations of the subject is necessarily rather skeletal this book attempts to flesh out the bones of such treatment by providing an informal but systematic account of the foundations of mathematical analysis written at an elementary level this book is entirely self contained but as indicated above it will be of most use to university or college students who are taking or who have taken an introductory course in analysis such a course will not automatically cover all the material dealt with in this book and so particular care has been taken to present the material in a manner which makes it suitable for self study in a particular there are a large number of examples and exercises and where necessary hints to the solutions are provided this style of presentation of course will also make the book useful for those studying the subject independently of taught course

in kurzer und prägnanter form wird die analysis der grundvorlesung vorgestellt im gegensatz zu den analysisbänden von blatter und forster finden sich hier viele historische anmerkungen außerdem wird viel wert auf sachbezogene motivation gelegt zusammen mit dem zum wintersemester erscheinenden band analysis 2 eignet sich dieses werk hervorragend zur prüfungsvorbereitung nicht nur für mathematikstudenten sondern gerade auch für informatik physik und technikstudenten

the first volume of three providing a full and detailed account of undergraduate mathematical analysis

includes the institute s proceedings

june issues 1941 44 and nov issue 1945 include a buyers guide section

version 5 0 a first course in rigorous mathematical analysis covers the real number system sequences and series continuous functions the derivative the riemann integral sequences of functions and metric spaces

originally developed to teach math 444 at university of illinois at urbana champaign and later enhanced for math 521 at university of wisconsin madison and math 4143 at oklahoma state university the first volume is either a stand alone one semester course or the first semester of a year long course together with the second volume it can be used anywhere from a semester early introduction to analysis for undergraduates especially chapters 1 5 to a year long course for advanced undergraduates and masters level students see jirka org a table of contents of this volume i introduction 1 real numbers 2 sequences and series 3 continuous functions 4 the derivative 5 the riemann integral 6 sequences of functions 7 metric spaces this first volume contains what used to be the entire book basic analysis before edition 5 that is chapters 1 7 second volume contains chapters on multidimensional differential and integral calculus and further topics on approximation of functions
