this text serves as a pedagogical introduction to the theoretical concepts on application of
topology in condensed matter systems it covers an introduction to basic concepts of
topology emphasizes the relation of geometric concepts such as the berry phase to
topology having in mind applications in condensed matter in addition to describing two
basic systems such as topological insulators and topological superconductors it also
reviews topological spin systems and photonic systems it also describes the use of quantum

information concepts in the context of topological phases and phase transitions and the effect of non equilibrium perturbations on topological systems this book provides a comprehensive introduction to topological insulators topological superconductors and topological semimetals it includes all the mathematical background required for the subject there are very few books with such a coverage in the market

this book represents the first comprehensive treatment of the subject covering the theoretical principles present experimental status and important applications of short pulse laser matter interactions femtosecond lasers have undergone dramatic technological advances over the last fifteen years generating a whole host of new research activities under the theme of ultrafast science the focused light from these devices is so intense that ordinary matter is torn apart within a few laser cycles this book takes a close up look at the exotic physical phenomena which arise as a result of this new form of light matter interaction covering a diverse set of topics including multiphoton ionization rapid heatwaves fast particle generation and relativistic self channeling these processes are central to a number of exciting new applications in other fields such as microholography optical particle accelerators and photonuclear physics repository for numerical models described in chapter 6 can be found at fz juelich de zam cams plasma splim a

the question of matter has been a quiet but enduring question in our desire to know being and therefore to know ourselves since we began to ask questions about the nature of being at all indeed in the timaeus plato writes that matter is only graspable by some bastard reasoning the use of this evocative adjective is not meant simply to indicate that matter is bad or the source of all evil but rather indicates matter s middleness not exactly being itself but also not nonbeing simpliciter thus thinking about matter cannot happen in the usual way ferdinand ulrich is not a usual thinker and this book seeks to illuminate ulrich s radical way of thinking being and thinking being as gift which is to say it seeks to explain ulrich s metaphysics of creation it does so in light of ulrich s understanding of matter which has a central place in his work and indeed is for ulrich the test case for whether any metaphysics is sufficiently radical
