in this book martin bunzl considers the prospects for a general and comprehensive account of explanation given the variety of interests that prompt explanations in science bunzl argues that any successful account of explanation must deal with two very different contexts one static and one dynamic traditionally theories of explanation have been built for the former of these two contexts that is to say they are designed to show how it is that a finished body of scientific knowledge can be put to explanatory use but finished sciences are few and far between real explanation also occurs in a dynamical context in which questions are asked and answers are given as theories are in the process of being constructed here bunzl argues that attending to explanation produced under these dynamic circumstances undermines prominent features of the theory of explanation produced in the traditional static context

from sudoku to quantum mechanics unraveling the mysteries of mathematics what s the formula for changing intimidation to exhilaration when it comes to math it s the handy math answer book from a history dating back to prehistoric times and ancient greece to how we use math in our everyday lives this fascinating and informative guide addresses the basics of algebra calculus geometry and trigonometry and then proceeds to practical applications you ll find easy to follow explanations of how math is used in daily financial and market reports weather forecasts real estate
