this monograph poses a series of key problems of evidential reasoning and argumentation it then offers solutions achieved by applying recently developed computational models of argumentation made available in artificial intelligence each problem is posed in such a way that the solution is easily understood the book progresses from confronting these problems and offering solutions to them building a useful general method for evaluating arguments along the way it provides a hands on survey explaining to the reader how to use current argumentation methods and concepts that are increasingly being implemented in more precise ways for the application of software tools in computational argumentation systems it shows how the use of these tools and methods requires a new approach to the concepts of knowledge and explanation suitable for diverse settings such as issues of public safety and health debate legal argumentation forensic evidence science education

and the use of expert opinion evidence in personal and public deliberations

this text introduces university students to the philosophical ethos of critical thinking as well as to the essential skills required to practice it the authors believe that critical thinking should engage students with issues of broader philosophical interest while they develop their skills in reasoning and argumentation the text is informed throughout by philosophical theory concerning argument and communication from aristotle s recognition of the importance of evaluating argument in terms of its purpose to habermas s developing of the concept of communicative rationality the authors treatment of the topic is also sensitive to the importance of language and of situation in shaping arguments and to the necessity in argument of some interplay between reason and emotion unlike many other texts in this area then good reasons for better arguments helps to explain both why argument is important and how the social role of argument plays an important part in determining what counts as a good argument if this text is distinctive in the extent to which it deals with the theory and the values of critical thinking it is also noteworthy for the thorough grounding it provides in the skills of deductive and inductive reasoning the authors present the reader with useful tools for the interpretation evaluation and construction of arguments a particular feature is the inclusion of a wide range of exercises rich with examples that illuminate the practice of argument for the student many of the exercises are self testing with answers provided at the back of the text others are appropriate for in class discussion and assignments challenging yet accessible good reasons for better arguments brings a fresh perspective to an essential subject

contemporary essays address the central problem of power in assent rhetoric

this series of books presents the fundamentals of logic in a style accessible to both students and scholars the text of each essay presents a story the main line of development of the ideas while the notes and appendices place the research within a larger scholarly context the essays overlap forming a unified analysis of logic as the art of reasoning well yet each essay is designed so that it may be read independently the question addressed in this volume is how we can justify our beliefs through reasoning the first essay arguments investigates what it is that we call true or false and how we reason toward truths through arguments a general theory of argument analysis is set out on the basis of what we can assume about those with whom we reason the next essay fallacies explains how the classification of an argument as a fallacy can be used within that general approach in contrast there is no agreement on what the terms induction and deduction mean and they are not useful in evaluating arguments as shown in induction and deduction in reasoning to truths in the end we must take some claims as basic not requiring any justification for accepting them how we choose those claims and how they affect our reasoning is examined in base claims the essay analogies considers how comparisons can be used as the basis of arguments arguing from similar situations to similar conclusions an important use of analogies is in reasoning about the mental life of other people and things which is examined in subjective claims written with fred kroon and william s robinson generalizing examines how to argue from part of a collection or mass to the whole or a larger part the question there is whether we are ever justified in accepting such an argument as good probabilities sets out the three main ways probability statements have been

interpreted the logical relation view the frequency view and the subjective degree of belief view each of those is shown to be inadequate to make precise the scale of plausibility of claims and the scale of the likelihood of a possibility many discussions of how to reason well and what counts as good reason are given in terms of who or what is rational in the final essay rationality it s shown that what we mean by the idea of someone being rational is of very little use in evaluating reasoning or actions this volume is meant to give a clearer idea of how to reason well setting out methods of evaluation that are motivated in terms of our abilities and interests at the ground of our reasoning though are metaphysical assumptions too basic and too much needed in our reasoning for us to justify them through reasoning but we can try to uncover those assumptions to see how they are important and what depends on them
