this second updated and extended edition of the handbook of research on comparative human resource management draws on the work of many of the world's leading researchers in the field to present the state of the art to scholars students and practitioners the handbook provides a detailed focus on the theoretical underpinnings of comparative hrm on comparative studies of specific areas of hrm practice and on the unique features of hrm in all the main regions of the world

this paper reports evidence on the characteristics of fixed and flexible exchange rate regimes it contrasts experience under three interwar exchange rate regimes the free float of the early 1920s the fixed rates of 1927-31 and the managed float of the early 1930s a number of important differences across nominal exchange rate regimes emerge major findings include 1 the variability of nominal exchange rates was positively associated with the freedom of the float nominal rates were considerably more variable under free than managed floating 2 the reduction in nominal exchange rate variability achieved with the move from free to managed floating was not accompanied by a commensurate fall in exchange rate uncertainty while government policy succeeded in damping spot rate fluctuations it seems to have been subject to periodic shifts that heightened risk 3 there was a strong association between nominal exchange rate predictability and real exchange rate predictability in both the free float of 1922-26 and the managed float of 1932-36 together with 2 this implies that intervention to stabilize nominal rates did not guarantee a commensurate reduction in real exchange rate uncertainty 4 there was no direct correspondence between the degree of exchange rate stability and the volume of international capital flows real interest differentials were larger under the managed

float of the 1930s than under the free float of the 1920s 5 capital controls provide a major part of the explanation for differences across regimes in the magnitude of real interest differentials controls were considerably more prevalent under managed floating than under either free floating or fixed rates thus interwar experience provides a counterexample to the popular notion that capital controls tend to be associated with fixed rate regimes

this book is about two polemical issues in labour studies namely the notions and determinants of labour productivity and flexibility this book attempts to develop the notion of labour input flexibility or the capacity of workers to adapt to changes in the environment and its relation with labour productivity the role of institutions employment practices capital labour relations and labour market policies in determining labour flexibility is emphasized the chapters look at the experiences of industrialized countries european countries the usa canada and japan and three latin american countries brazil chile and mexico

within the context of social law temporary agency work has always been subject of debate the pursuit of more flexible forms of labour is at odds with maintaining decent labour relations for that reason ever since it was established the un organisation for labour issues ilo has focused on private work placement in its early years it tended to prohibit or severely restrict private work placement but gradually it came to acknowledge that for instance temporary agency work had positive aspects and that a total ban was pointless in 1997 this culminated in ilo convention 181 which was widely supported this did not end the debate on non standards forms of paid work which forms of work can be considered decent how do they relate to human rights what are the effects of globalisation in the european context too cross border temporary agency work has attracted extensive attention lastly the netherlands has its own unique form of public private regulation the guiding principle in this book is whether convention 181 still has value in this day and age what are the developments in temporary agency work in the social domain how do they relate to the wide range of flexible work forms that are increasingly catching up with temporary agency work decent flexibility is the challenge dr fred van haasteren 1949 started his career as a scientific associate at the society and enterprise foundation smo from 1978 onward he worked in the dutch temporary agency sector in 1982 he became a board member of randstad nederland in 1991 he became vice president of randstad holding among other things he was also president of the platform of european temporary

agency employers and of the global temporary agency employer umbrella organisation ciett he is still a board member of the dutch labour standards foundation sna and an independent member of the ncp oecd the social policy pursued by temporary employment agencies has always been at the centre of his activities

phosphorylation was studied at length because it shifts the conformational ensemble population distribution since simulations of phosphorylated residues remain largely unexplored i explored the suitability of current solvation models to properly react to a phosphate moiety hydrogen bonding of phosphorylated residues explained phosphorylation induced shifts in $^3J_{NH-CA}$ coupling constants for short tetrapeptides this underscored the need for the solvation model to modulate hydrogen bond strength a distance dependent dielectric performed consistently poorly in our simulations while a generalized born treatment and the explicit water models tip3p tip4p and spc e provided satisfactory results in addition the role of polarizability in interactions of phosphorylated residues was explored ab initio calculations made it clear polarizability contributes to phosphorylated residues preference for arginine over lysine as salt bridge partners it was also found the protonated phosphate moiety 1 and the carboxylate ion have similar interaction energies with arginine and lysine which may explain why carboxylic acids can sometimes substitute for phosphorylation
