the research handbook on international water law surveys the field of the law of shared freshwater resources in some thirty chapters it covers subjects ranging from the general principles operative in the field and international groundwater law to the human right to water and whether international water law is prepared to cope with climate disruption the authors are internationally recognized experts in the field most with years of experience the research handbook is edited by three scholars and practitioners whose publications and work deal with the law of international watercourses

this book examines the development of international law applicable to transboundary aquifers tbas considering the human right to water and sanitation hrws the purpose is to determine how international water law iwl and the hrws can be harmonized in the context of tbas this is important given rules and instruments adopted to address this topic are relatively nascent and the field itself is still in the process of developing regulatory frameworks taking the application of the hrws to shared aquifers as a case study the work discusses whether iwl and international human rights law complement each other the response to this question requires an analysis of the development of international groundwater law and its challenges the evolution of the hrws the nature of transboundary groundwaters and the interplay between these two fields the author argues that iwl agreements should contain a provision related to the hrws to ensure the protection of this right with a stipulation included in the nonbinding instrument that tackles shared groundwaters the draft articles on the law of transboundary aquifers adopted in 2008 through the united nations general assembly resolution the book will be of interest to international lawyers water and human right experts geologists and anyone interested in
