this user's manual provides detailed instruction for the design of commercial and high rise residential buildings to ensure their compliance with ANSI/ASHRAE 90.1-2004. In addition, this manual encourages the user to apply the principles of effective energy conserving design when designing buildings and building systems. It offers information on the intent and application of standard 90.1, illuminates the standard through the use of abundant sample calculations and examples, streamlines the process of showing compliance, provides standard forms to demonstrate compliance, provides useful reference material to assist designers in efficiently completing a successful and complying design. This manual also instructs the user in the application of several tools used for compliance with standard 90.1: the ENVSIM computer program used in conjunction with the building envelope trade-off compliance method, the selection and application of energy simulation programs used in conjunction with the energy cost budget method of compliance. This manual is intended to be useful to numerous types of building professionals including architects and engineers who must apply the standard to the design of their buildings, plan examiners and field inspectors who must enforce the standard in areas where it is adopted as code, general and specialty contractors who must construct buildings in compliance with the standard, product manufacturers, state and local energy offices, policy groups, utilities and others.

The OECD Nuclear Energy Agency (NEA) first published in 2000 Nuclear Education and Training: Cause for Concern, which highlighted significant issues in the availability of human resources for the nuclear industry. Ten years on, Nuclear Education and Training from Concern to Capability considers what has changed in that time and finds that while some countries have taken positive actions in a number of others, human resources could soon be facing serious challenges in coping with existing and potential new nuclear facilities. This is exacerbated by the increasing rate of retirement as the workforce ages. This report provides a qualitative characterisation of human resource needs and appraises instruments and programmes in nuclear education and training initiated by various stakeholders in different countries. In this context, it also examines the current and future uses of nuclear research facilities for education and training purposes regarding the nuclear training component of workforce competence. It outlines a job taxonomy which could be a basis for addressing the needs of workers across this sector. It presents the taxonomy as a way of enhancing mutual recognition and increasing consistency of education and training for both developed and developing countries.
