this book is the product of more than half a century of leadership and innovation in physics education when the first edition of university physics by francis w sears and mark w zemansky was published in 1949 it was revolutionary among calculus based physics textbooks in its emphasis on the fundamental principles of physics and how to apply them the success of university physics with generations of several million students and educators around the world is a testament to the merits of this approach and to the many innovations it has introduced subsequently in preparing this first australian si edition our aim was to create a text that is the future of physics education in australia we have further enhanced and developed university physics to assimilate the best ideas from education research with enhanced problem solving instruction pioneering visual and conceptual pedagogy the first systematically enhanced problems and the most pedagogically proven and widely used online homework and tutorial system in the world mastering physics

a valuable synthesis of the physics of magmatism for students and scholars magma genesis and segregation have shaped earth since its formation more than 4.5 billion years ago now for the first time the mathematical theory describing the physics of magmatism is presented in a single volume the dynamics of partially molten rock offers a detailed overview that emphasizes the fundamental physical insights gained through an analysis of simplified problems this textbook brings together such topics as fluid dynamics rock mechanics thermodynamics and petrology geochemical transport plate tectonics and numerical modeling end of chapter exercises and solutions as well as online python notebooks provide material for courses at the advanced undergraduate or graduate level this book focuses on the partial melting of earth's asthenosphere but the theory presented is also more broadly relevant to natural systems where partial melting occurs including ice sheets and the deep crust mantle and core of earth and other planetary bodies as well as to rock deformation experiments conducted in the laboratory for students and researchers aiming to understand and advance the

cutting edge the work serves as an entrée into the field and a convenient means to access the research literature notes in each chapter reference both classic papers that shaped the field and newer ones that point the way forward the dynamics of partially molten rock requires a working knowledge of fluid mechanics and calculus and for some chapters readers will benefit from prior exposure to thermodynamics and igneous petrology the first book to bring together in a unified way the theory for partially molten rocks end of chapter exercises with solutions and an online supplement of jupyter notebooks coverage of the mechanics thermodynamics and chemistry of magmatism and their coupling in the context of plate tectonics and mantle convection notes at the end of each chapter highlight key papers for further reading

a unique introduction to the concepts of quantum mechanics quantum evolution addresses the present status of time dependent quantum mechanics for few body systems with electromagnetic interactions it bridges between the quantum mechanics of stationary quantum systems and a number of recent advanced theoretical treatises on various aspects of quantum mechanics the focus is on strongly quantum and semi classical systems including the quantum manifestations of orderly and chaotic nonlinear classical dynamics

richard wolfson s essential university physics is a concise and progressive calculus based physics textbook that offers clear writing great problems and interesting real life applications at nearly half the length and half the price of other physics texts on the market essential university physics is a compelling alternative for professors who want to focus on the fundamentals doing physics 1 mechanics motion in a straight line motion in two and three dimensions force and motion using newton s laws work energy and power conservation of energy gravity systems of particles rotational motion rotational vectors and angular momentum static equilibrium part 2 oscillations waves and fluids oscillatory motion wave motion fluid motion thermodynamics temperature and heat the thermal behavior of matter heat work and the first law of thermodynamics the second law of thermodynamics for all readers interested in calculus based physics
