this book describes the highway design and maintenance standards model hdm iii and its constituent components and provides a comprehensive discussion of the submodels their interaction and the operational parameters involved the hdm iii is designed to make comparative cost estimates and economic evaluations of different construction and maintenance options including different time staging strategies either for a given road project on a specific alignment or for groups of links on an entire network the user can search for the alternative with the lowest discounted total cost and can call for rates of return net present values or first year benefits if the hdm is used in conjunction with the expenditure budgeting model the set of design and maintenance options that would minimize total discounted transport costs or maximize net present value of an entire highway system under year to year budget constraints can be determined the hdm iii model is not only a readily usable program for handling voluminous computations automatically it is also a repository of the most extensive and consistent set of empirical data on the subject the information includes the qualitative structure and quantitative parameters of relationships among construction standards maintenance traffic characteristics road deterioration and vehicle operating costs

in the 1980 s new developments and commercial offerings will radically change the relationship of the computer and those who wish to use it the emphasis today is on the needs of the user on systems that are easier to learn easier to use more responsive and more solution oriented modern end user facilities allow almost anyone to interact directly with the computer this book is intended for applications programmers and system analysts who design and implement systems for users who

have no expertise in computing it describes trends and techniques that enable nonexperts to interact easily with computerized systems and use them to become more productive the papers appearing here were selected because they are the best available descriptions of what end user facilities will be like for the remainder of this decade

work that has been carried out previously on features analysis on online public access catalogues and command comparisons for online information retrieval systems is compared and extended to produce a series of tabulations and explanations of functions with examples the tabluations are developed within the 4 functional areas established by hildreth operational control search formulation control output control and user assistance the tabulations may be used for evaluation of different systems for analysis of user preferences and requirements as the basis of a comparative guide for users of several systems to aid standardisation of terminology and as a training tool an example of the use of the features analysis is given for search formulation control on abn and ausinet original abstract

powerful personal workstations with high resolution displays pointing devices and windowing environments have created many new possibilities in presenting information accessing data and efficient computing in general in the context of document preparation this workstation based technology has made it possible for the user to directly manipulate a document in its final form the central idea is that a document is immediately reprocessed as it is edited no syntactic constructs are explicitly used to express teh desired operations this so called direct manipulation approach differs substantially from the traditional source language model in which document semantics structures and appearances are specified with interspersed markup comands in the source language model a document is first prepared with a text editor

its formatting and other related processors are then executed usually in batch mode and the result is obtained a complete document development process involves a number of subtasks ranging from authoring reading filing to printing there are certain aspects of document development that are best suited to a source language approach while others are easier
