 wittgenstein claimed that mathematical logic had completely
 deformed the thinking of mathematicians and philosophers but the
 full realisation of this insight has yet to sink home in this book
 it is first shown that some 20th century criticisms of classical
 logic are misguided specifically those which take issue in one way
 or another with reductio or indirect proof a considerable number
 of points are made against both intuitionistic logic and
 paraconsistent logic on this score the book then moves on to
 propose some needed adjustments to classical logic by
 incorporating elements in natural language not standardly
