shape space and measures provides creative play activities for teaching new concepts and skills in mathematics fifteen exciting themes explore the different elements of shape space and measures including the properties of 2d and 3d shapes tessellation pattern capacity length weight time size and sequence of the day week and year activities use a range of resources to produce simple yet effective display and artwork all areas of early years learning are covered using the indoor and outdoor environment

this little book builds on children s natural enthusiasm and curiosity about shape and space the hands on easy to follow experiences cover both 2d and 3d shapes and will inspire children to explore the spaces all around them in both indoor and outdoor play and as they become familiar with the shapes and patterns in their every day environment

maintaining the standard of excellence set by the previous edition this textbook covers the basic geometry of two and three dimensional spaces written by a master expositor leading researcher in the field and macarthur fellow it includes experiments to determine the true shape of the universe and contains illustrated examples and engaging exercises that teach mind expanding ideas in an intuitive and informal way bridging the gap from geometry to the latest work in observational cosmology the book illustrates the connection between geometry and the behavior of the physical universe and explains how radiation remaining from the big bang may reveal the actual shape of the universe

in shape space spatial awareness is tackled through games and puzzles like mazes and congruent pieces

introduces students to one two and three dimensions in a very modern way by exploring some possible shapes for our 3

dimensional universe the students learn by example using paper and scissors activities pencil and paper games java based computer games and a computer animated video the shape of space to explore a few of the simplest possible universes p xi

the first edition of geometric morphometrics for biologists has been the primary resource for teaching modern geometric methods of shape analysis to biologists who have a stronger background in biology than in multivariate statistics and matrix algebra these geometric methods are appealing to biologists who approach the study of shape from a variety of perspectives from clinical to evolutionary because they incorporate the geometry of organisms throughout the data analysis the second edition of this book retains the emphasis on accessible explanations and the copious illustrations and examples of the first updating the treatment of both theory and practice the second edition represents the current state of the art and adds new examples and summarizes recent literature as well as provides an overview of new software and step by step guidance through details of carrying out the analyses contains updated coverage of methods especially for sampling complex curves and 3d forms and a new chapter on applications of geometric morphometrics to forensics offers a reorganization of chapters to streamline learning basic concepts presents detailed instructions for conducting analyses with freely available easy to use software provides numerous illustrations including graphical presentations of important theoretical concepts and demonstrations of alternative approaches to presenting results

light the shape of space designing with space and light lou michel every design professional who touches a space shapes the light and the feeling of that space architect lighting engineer interior designer lighting or home furnishing manufacturer each contributes an aesthetic layer sometimes yielding unexpected results all too often the best laid plans of one professional are unintentionally subverted by another removing surprises and guess work from design lou michel honored architectural lighting educator has created light the shape of space showing how to design with the effects of light rather than light itself the book is a revolutionary resource for all design professionals and manufacturers of surfacing materials drawing on over fifteen years

experience of research and teaching in the architectural space and light laboratory at the university of kansas michel masterfully examines the interrelationship of lighting and the design of architectural space as perceived not in architectural photos or paint chips and fabric swatches but by human vision the gateway to emotional response the book was written for professionals who care about how people feel in the spaces they design and focuses on the humanization of architecture taking a non stylistic approach to design michel analyzes architecture from the perspective of how the users see their surroundings as they move through space the reader will learn what pleases and what disturbs people based on how the human visual system responds to color texture pattern and brightness the book features principles of design for the student and professional and is generously supported by illustrations and research michel also provides a method for evaluating the visual effectiveness of building materials and lighting systems including those that will appear on the market long after this book is dog eared michel unveils a groundbreaking luminance brightness rating system lbr and a nine zone brightness scale to aid designers in previsualizing the appearance of surfacing materials at every stage of the design process from schematics to development to refinement among the topics treated are the interaction of lighting and spatial design color theory for space and light the luminance relationships between free standing objects and the surrounding spatial boundaries against which they are seen the appearance of building materials in color and brightness when modified by light and spatial location lighting spatial connections including the perception of rooms adjacent to the observer lighting and perception of spaces screened by architectural grilles creating lighted space designing with the effects of light is both an art and a science no other book on the market bridges that gap as successfully as light the shape of space
