nature and psyche argues that psychological and environmental writing and action are all too often colonized by the same assumptions that inhibit ecological and cultural diversity industrialized monocultures conceal the character of our alienation from nature and thus prevent the emergence of effective solutions drawing on a diversity of disciplines david kidner illustrates that traditional psychological understanding is often inherently hostile to the natural order and that the dominant form of selfhood that has emerged in the industrialized world promotes the domestication of nature in fact even some of the most radical environmentalists who simplistically oppose technology are also trapped within this paradigm the author demonstrates that a more critical historical and cultural awareness rooted in nature can enable a re integration of nature and psyche

c g jung emphasized the deep link to the physical world that exists for the collective unconscious and its archetypes our dreams and symbols as well as the patterns of our behavior are shaped by the fact that we are creatures of a material universe michael conforti s research has been directed to understanding the nature of these links and patterns in the light of the new sciences quantum theory chaos theory self organization and the new biology conforti s book successfully integrates this material to offer a new exciting challenge to psychotherapy it demonstrates that the study of consciousness cannot neglect the insights of the sciences and in doing so promises a unified view of mind and matter
