governments and road safety agencies around the world have either introduced or are considering safe system strategies a long overdue acknowledgement that different elements of the road system contribute to road safety outcomes human factors approaches have a leading role here in both conceptualising the road system as a complex sociotechnical system and in providing practical approaches to support true systems based countermeasures this book illustrates the potential for integrating contemporary systems based human factors methods with

modern day driving assessment methods such as vehicle instrumentation and driving simulation to understand and enhance performance in modern day road transport systems the book outlines why a fundamental paradigm shift is needed in the way these systems are designed and operated and illustrates how a wide range of accepted human factors approaches can be applied successfully to road transport to revolutionise the countermeasure design process the practical illustrations of these human factors methods are applied to a long standing road and rail safety issue rail level crossings where the road and rail systems intersect the final chapter of the book highlights the utility of the human factors approach to reducing road trauma and discusses future applications of the approach

this book will help readers gain a solid understanding of non functional requirements inherent in systems design endeavors it contains essential information for those who design use and maintain complex engineered systems including experienced designers teachers of design system stakeholders and practicing engineers coverage approaches non functional requirements in a novel way by presenting a framework of four systems concerns into which the 27 major non functional requirements fall sustainment design adaptation and viability within this model the text proceeds to define each non functional requirement to specify how each is treated as an element of the system design process and to develop an associated metric for their evaluation systems are designed to meet specific functional needs because non functional requirements are not directly related to tasks that satisfy these proposed needs designers and stakeholders often fail to recognize the importance of such attributes as availability survivability and robustness this book gives readers the tools and knowledge they need to both recognize the importance of these non functional requirements and incorporate them in the design process
