this dissertation examines the processes by which the intragroup division of labor structurally influences the development of group attachment it specifically addresses a classic sociological issue over whether specialization in the division of labor is beneficial or detrimental to the development of person to group bonds and group cohesion i propose that that solely looking at the independent effects of task specialization in isolation is problematic instead i suggest that it is more beneficial to characterize the division of labor in terms of the different relational aspects that underline micro interactional

task structure towards this aim my project proposes that interdependence in the division of labor is organized around three relational dimensions task coordination task differentiation and skill specialization which in combination exert complex influences on the development of person to group bonds the first part of my dissertation research proposes a new original theory that specifies how these three relation dimensions differentially impact three independent processes by which group cohesion can endogenously grow from task structure the second part of my dissertation centers around two major empirical analyses derived from data collected from a large scale laboratory experiment the first empirical study asks whether group bonding is higher in specialized teams the second empirical study asks whether the impact of specialization changes when task specialization is no longer equally differentiated among group members but is instead unequally divided amongst group members such that only a few group members possess unique skills important for team success this project provides three major theoretical contributions first it addresses a fundamental issue that lies at the heart of sociology by asking what structural aspects of social interaction encourage individuals to become more attached to a group second it re conceptualizes the division of labor on an interpersonal level by breaking the concept down into its constituent parts to analyze how the division of labor actually works in real social interaction third it brings insight to a major debate over whether organizational division of labor inhibits or enhances group solidarity by suggesting that the impact of task dimensions like specialization is not straightforward but is complex and can only be examined while in simultaneous combination with other task dimensions

ramold disputes the old argument that citizen soldiers in the union army differed little from civilians he shows how a chasm of mutual distrust grew between soldiers and civilians during four years of fighting that led many democratic soldiers to build the groundwork for the postwar republican party filled with gripping anecdotes this book makes for fascinating reading scott reynolds nelson college of william mary union soldiers left home in 1861 with expectations that the conflict would be short the purpose of the war was clear and public support back home was universal as the war continued however union soldiers noticed growing disparities between their own expectations and those of their families at home with growing concern and alarm instead of support for the war an extensive and oft violent anti war movement emerged in this first study of the gulf between union soldiers and northern civilians steven j ramold reveals the wide array of factors that prevented the union army and the civilians on whose behalf they were fighting from becoming a united front during the civil war in across the divide ramold illustrates how the divided spheres of civil war experience created social and political conflict far removed from the better known battlefields of the war steven j ramold associate professor of american history at eastern michigan university is the author of two previous books slaves sailors citizens african americans in the union navy and baring the iron hand discipline in the union army he and his wife reside in ypsilanti michigan
