in 1928 a new landmark in petrology appeared with the publication of bowen s

the evolution of the igneous rocks there has been an increasing need for a sequel especially to take into account the developments and consequences of high pressure experimentation as the gap between bowen's book and modern experimental petrology grew apace this volume treats selected areas in depth and the authors have tried to follow bowen in producing a perspective view of the subject advances made relating the experiments to geological observations and avoiding as much unfamiliar terminology as possible this book is a basic text in experimental petrology intended for earth scientists from the undergraduate level onwards

these proceedings emphasize all theoretical aspects of computational thermodynamics and kinetics and their impact on the science of alloys and materials design the book offers an assessment of the calphad calculation of phase diagrams approach pioneered by larry kaufman

this text on phase transformations is for final year undergraduate and postgraduate students of metallurgy materials science or engineering materials it should also be useful for researchers working in industrial materials laboratories
