this book is an attempt to add the human view to a period of history a thousand years it is done by looking at fourteen lifetimes

science a four thousand year history rewrites science s past instead of focussing on difficult experiments and abstract theories patricia fara shows how science has always belonged to the practical world of war politics and business rather than glorifying scientists as idealized heroes she tells true stories about real people men and some women who needed to earn their living who made mistakes and who trampled down their rivals in their quest for success fara sweeps through the centuries from ancient babylon right up to the latest hi tech experiments in genetics and particle physics illuminating the financial interests imperial ambitions and

publishing enterprises that have made science the powerful global phenomenon that it is today she also ranges internationally illustrating the importance of scientific projects based around the world from china to the islamic empire as well as the more familiar tale of science in europe from copernicus to charles darwin and beyond above all this four thousand year history challenges scientific supremacy arguing controversially that science is successful not because it is always right but because people have said that it is right
