the cost of capital lies at the heart of corporate finance where the individual costs of the firm's sources of finance are evaluated to be able to assess the cost of capital is vital to your company's strategic plan this briefing provides you with the means to do so

a lot of finance textbooks present calculation of wacc weighted average cost of capital as $wacc = kd(1-t) + ke + e$ whereas kd is opportunity cost of debt before taxes t is tax rate d is percentage of debt to total value ke is opportunity cost of equity and e is percentage of equity to total value numerous textbooks state that d and e are market values but the correct interpretation of these values is not sufficiently dealt with which market values what d/e ratio no matter how the financing is done there is actually only one standard net wacc wacc changes in time one needs an up to date wacc yes indeed but what and how exactly in short many questions still remain but up to the present they do not have unequivocal answers the purpose of this paper is to clear up these questions and emphasize in some ideas that usually are overlooked famous writers e.g. pablo fernandez ignacio velez pareja and joseph tham claim to calculate the firm's value it is necessary to know the wacc figure but to calculate wacc the firm's value among other data like the financing profile is needed indeed one needs to know the wacc in order to calculate the firm's value however to calculate wacc several data are truly needed just not the firm's value many misconceptions exist about firm valuation and the valuation of tax shields vts as well as the correct calculation of wacc although franco modigliani and merton miller mm for short were awarded the nobel prize in economics their propositions i and ii appear to be clearly incorrect many theories and much advise is flawed by the demasque of mm's proposition i 1958 equation 3 which states in the absence of taxes the firm's value is independent of its debt the so called proof given by mm is not a mathematical proof it was and is a statement that cannot stand the test proposition i is not true re ssrn id609102 consequently everything based on proposition i is not true either this paper repudiates proposition ii constituting ke being a cost to the firm and similarly a return to the equity investor ke and wacc are measuring costs just costs return and cost values coincide at intersect points only of clearly divergent return and respectively cost functions

the cost of capital is one of the fundamental concepts of modern finance the theoretical value of a firm is the sum of its future cash flows discounted back to present value by this cost of capital in classical theory companies should only accept projects that have returns higher than their cost of capital there has been considerable research into the determination of the cost of capital but less into the practical side is there a measurable relationship between cost of capital and investment do firms that generate sufficient cash flow from their investments enjoy a lower cost of capital than those that do not this paper looks at these questions from an emerging markets perspective given the increase in both available information and interest in these markets focusing on the information technology sector

in addition to the cost of capital we include other variables such as corruption perceptions cash flows and institutional ownership which can theoretically impact both the level of investment and the cost of capital we find evidence of a significant relationship between both cash flow and corruption to the rate of investment however the relationship between investment and cost of capital is less clear
