a distinguished economist examines competition regulation and stability in today s global banks does too much competition in banking hurt society what policies can best protect and stabilize banking without stifling it institutional responses to such questions have evolved over time from interventionist regulatory control after the great depression to the liberalization policies that started in the united states in the 1970s the global financial crisis of 2007 2009 which originated from an oversupply of credit once again raised questions about excessive banking competition and what

should be done about it competition and stability in banking addresses the critical relationships between competition regulation and stability and the implications of coordinating banking regulations with competition policies xavier vives argues that while competition is not responsible for fragility in banking there are trade offs between competition and stability well designed regulations would alleviate these trade offs but not eliminate them and the specificity of competition in banking should be accounted for vives argues that regulation and competition policy should be coordinated with tighter prudential requirements in more competitive situations but he also shows that supervisory and competition authorities should stand separate from each other each pursuing its own objective vives reviews the theory and empirics of banking competition drawing on up to date analysis that incorporates the characteristics of modern market based banking and he looks at regulation competition policies and crisis interventions in europe and the united states as well as in emerging economies focusing on why banking competition policies are necessary competition and stability in banking examines regulation s impact on the industry s efficiency and effectiveness

how do applications affect behavior experimental economics volume ii seeks to answer these questions by examining the auction mechanism imperfect competition and incentives to understand financial crises political preferences and elections and more

we use a unique new database to examine micro depositor level data for a bank that faced a run we use minute by minute depositor withdrawal data to understand the effectiveness of deposit insurance the role of social networks and the importance of bank depositor relationships in influencing depositor propensity to run we employ methods from the epidemiology literature which examine how diseases spread to estimate transmission probabilities of depositors running and the significant underlying factors we find that deposit insurance is only partially effective in preventing bank runs further our results suggest that social network effects are important but are mitigated by other factors in particular the length and depth of the bank depositor relationship depositors with longer relationships and those who have availed of loans from a bank are less likely to run during a crisis suggesting that cross selling acts not just as a revenue generator but also as a complementary insurance mechanism for the bank finally we find there are long term effects of a solvent bank run in that depositors who run do not return back to the bank our results help understand the underlying dynamics of bank runs and hold important policy implications
