from the introduction mrs fisher has written a book on elementary economics which those who come to it with open minds and with a willingness to think over what she says will find both interesting and enlightening to have produced so animated and yet so judicious a little volume is something of an achievement it could be accomplished only by one who has learnt as a teacher to enter into the minds of others and who possesses the gift of lucid expression the writer of this book stands in the line of spiritual succession to the

creators of english political economy to adam smith and ricardo and john stuart mill her readers will observe with what respect she refers to these masters and if they should continue their economic studies they will find that the fundamental assumptions of the founders of systematic economic teaching are hers also i must confess that there have been very many earlier books which essayed the same task in a similar spirit which i should have hesitated to commend english political economy when it first presented itself to the world as an ordered body of thought combined with much that was true and of permanent value much that was so one sided as to be misleading and no little that was simply erroneous applied with the best intentions but with imperfect understanding of human nature as the adequate explanation and even in a sense as the justification of the grave social evils of the time it deservedly aroused the fierce antagonism of many of the more intelligent of the working people and it may be doubted whether for half a century it did not do more harm than good but since mill s time there has been much fresh thinking among economists and wider horizons have opened to them and in this treatise of mrs fisher it is the more permanently valuable parts of the old teaching which survive qualified and safeguarded by many of the results of later observation the author has strong and definite opinions but the temper of her book is generous and fair minded she will be very well satisfied i am sure if her book sets her readers thinking and makes them realise the strength of the forces she shows to be at work even if they do not on all points reach the same final conclusions there may be legitimate divergences of opinion as to the relative magnitude of conflicting considerations but in the main the considerations which mrs fisher sets forth and sets forth with so much spirit are such as all economists agree to be important and the general line of reasoning and exposition which she follows with so firm a tread will be found by most people the most convenient path of approach to any further examination of the insistent problems of industrial society
