cancer care is undergoing a radical transformation as novel technologies are directed toward new treatments and personalized medicine the most dramatic advances in the treatment of cancer have come from therapeutics that augment the immune response to tumors the immune checkpoint inhibitors are the best known and most highly advanced examples of immune therapeutics targeting tumor cells and include approved antibody drugs directed at the cell surface proteins ctla4 and pd 1 these are now considered foundational treatments for several solid tumor indications and that list of indications is growing quickly more broadly antibodies have become workhorse molecules across the entire immunotherapy landscape antibodies to novel targets modulate the activity of diverse immune cell regulatory proteins engineered antibodies can induce tumor cell death or expose tumor cells to poisonous toxins adcc and adc respectively bi specific antibodies can engage multiple tumor targets simultaneously or can redirect

lymphocytes to attack tumor cells the antigen binding domains within antibodies can be spliced onto cell stimulatory domains and transduced into t cells or nk cells creating remarkable tumor specific cellular therapeutics car t car nk beyond antibody based therapies there are highly diverse and differentiated technology tool kits being applied to immunotherapy small molecule drugs are being developed to attack the tumor microenvironment novel tumor vaccine approaches are showing great promise patient lymphocytes are being isolated expanded and reintroduced to patients gene editing techniques are becoming widely deployed and a vast number of new tumor targets and mutated tumor proteins neoantigens are being discovered the past decade has seen unprecedented success in the treatment of diverse cancers the authors of this volume have been asked to not only review progress to date but importantly to look ahead and anticipate the evolution of cancer treatment across diverse immune therapeutic approaches our hypothesis is that the advances we are seeing across the immunotherapy landscape will further evolve and synergize leading us finally to outright cures for many cancers

the study of the biology of tumours has grown to become markedly interdisciplinary involving chemists statisticians epidemiologists mathematicians bioinformaticians and computer scientists alongside biologists geneticists and clinicians the oxford textbook of cancer biology brings together the most up to date developments from different branches of research into one coherent volume providing a comprehensive and current account of this rapidly evolving field structured in eight sections the book starts with a review of the development and biology of multi cellular organisms how they maintain a healthy homeostasis in an individual and a description of the molecular basis of cancer development the book then illustrates as once cells become neoplastic their signalling network is altered and pathological behaviour follows it explores the changes that cancer cells can induce in nearby normal tissue the new relationship established between them and the stroma and the interaction between the immune system and tumour growth the authors illustrate the contribution provided by high throughput techniques to map cancer at different levels

from genomic sequencing to cellular metabolic functions and how information technology with its vast amounts of data is integrated with traditional cell biology to provide a global view of the disease the effect of the different types of treatments on the biology of the neoplastic cells are explored to understand on the one side why some treatments succeed and on the other how they can affect the biology of resistant and recurrent disease the book concludes by summarizing what we know to date about cancer and in what direction our understanding of cancer is moving edited by leading authorities in the field with an international team of contributors this book is an essential resource for scholars and professionals working in the wide variety of sub disciplines that make up today s cancer research and treatment community it is written not only for consultation but also for easy cover to cover reading

the rapid flow of studies in the field of cancer and immunology during the last decades has increased our understanding of the interactions between the immune system and cancerous cells in particular it has been well known that such interactions result in the induction of epigenetic changes in cancerous cells and the selection of less immunogenic clones as well as alterations in immune responses understanding the crosstalk between nascent transformed cells and cells of the immune system has led to the development of combinatorial immunotherapeutic strategies to combat cancer the handbook of cancer and immunology offers a comprehensive and up to date review of cancer immunology and immunotherapy emphasizing key findings and clinically relevant data this reference work is an essential resource for researchers students academics and clinicians committed to advancing knowledge diagnostics and treatments in this vital field
