a study of the relationship between the sound of an utterance and its meaning

palestrina s music is justly regarded as exemplifying the most perfect and consistent technique of sixteenth century ecclesiastical polyphony it is for this reason that a study of his style has come to be considered as a necessary part of the training of serious musicians not only is the technique well nigh perfect in itself but it is also the vehicle of expression for some of the noblest music of the great age of vocal counterpoint this book investigates the various technical processes as they appear in the music itself for that reason copious music examples have been given and the reader is asked to take very little theory on trust he is invited to examine for himself what palestrina did or did not do the book is on the one hand more specialized than morris contrapuntal technique its conclusions are therefore easier to grasp because less subject to exceptions and qualifications on the other hand it is wider in scope than jeppesen s palestrina and the dissonance in particular it includes a thorough and sensitive analysis of palestrina s methods of form and design a subject that has hitherto been much neglected dr andrews has given many years to the study and teaching of palestrina s style at oxford and to the actual performance of the music during the time when he was in charge of the music at new college his knowledge of the subject is not confined to academic dissection of technical matters he is fully aware of the aesthetic and expressive powers of the music which as he points out can only be fully realized in its performance in the service of the church dust jacket
