A major new novel from one of science fiction's most powerful voices. Aurora tells the incredible story of our first voyage beyond the solar system, brilliantly imagined and beautifully told. It is the work of a writer at the height of his powers. Our voyage from Earth began generations ago; now we approach our new home. Aurora.

An early novel from science fiction legend Kim Stanley Robinson, *The Memory of Whiteness* is now available for the first time in decades. In 3229 AD, human civilization is scattered among the planets, moons, and asteroids of the solar system. Billions of lives depend on the technology derived from the breakthroughs of the greatest physicist of the age, Arthur Holywelkin. But in the last years of his life, Holywelkin devoted himself to building a strange, beautiful, and complex musical instrument that he called the orchestra. Johannes Wright has earned the honor of becoming the ninth master of Holywelkin's orchestra. Follow him on his grand tour of the solar system as he journeys down the gravity well toward the sun, impelled by a destiny he can scarcely understand and is pursued by mysterious foes who will tell him anything except the reason for their enmity. *Red Moon* is a magnificent novel of space exploration and political revolution from New York Times bestselling author Kim Stanley Robinson. It is thirty years from now, and we have colonized the moon. American Fred Fredericks is making his first trip; his purpose is to install a communications system for China's Lunar Science Foundation. But hours after his arrival, he witnesses a murder and is forced into hiding. It is also the first visit for celebrity travel reporter Ta Shu. He has contacts and influence, but he too will find that the moon can be a perilous place for any traveler. Finally, there is Chan Qi. She is the daughter of the minister of finance, and without doubt, a person of interest to those in power. She is on the moon for reasons of her own, but when she attempts to return to China in secret, the events that unfold will change everything on the moon and on Earth.

Set in our nation's capital, here is a chillingly realistic tale of people caught in the collision of science technology and the consequences of global warming. When the storm got bad, Frank Vanderwal was in his office at the National Science Foundation when it was over. Large chunks of San Diego had eroded into the sea, and D.C. was underwater. Everything Frank and his colleagues feared had culminated in this disaster, and now the world was looking to them to fix it. But even as D.C. bails itself out, a more extreme climate change looms. The melting polar ice caps are shutting down the warm Gulf Stream waters, meaning ice age conditions could return, and the last time that happened, eleven thousand years ago, it took just three years to start.

New York Times bestselling author Kim Stanley Robinson returns with a bold and brilliant vision of New York City in the next century. As the sea levels rose, every street became a canal, every skyscraper an island. For the residents of one apartment building in Madison Square, however, New York in the year 2140 is far from a drowned city. There is the market trader who finds opportunities where others find trouble. There is the detective whose work will never disappear, along with the lawyers, of course. There is the internet star beloved by millions for her airship adventures, and the building's manager, quietly respected for his attention to detail. Then there are two boys who don't live there but have no other home and who are more important to its future than anyone might imagine. Lastly, there are the coders, temporary residents on the roof whose disappearance triggers a sequence of events that

threatens the existence of all and even the long hidden foundations on which the city rests
