drawing upon the many disciplines that have contributed to brain research anatomy physiology clinical neurology psychology psychiatry the author traces three centuries of ideas about movement and the brain

this book examines the history of western attempts to explain how messages might be sent from the sense organs to the brain and from the brain to the muscles it focuses on a construct called animal spirit which would permeate philosophy and guide physiology and medicine for over two millennia

thinking about thinking mind and meaning in the era of techno nihilism addresses our existential crisis by reminding us of the conditions for meaning that have been obscured by the modern technological mentality madden weaves together disparate insights from wittgenstein hegel aristotle heidegger merleau ponty nietzsche sophocles and others in an attempt to account for our mindedness in terms of its inextricable connection to a world capable of inspiring our care the mind is not a discrete entity locked behind the skull or withdrawn into a ghostly realm but a participation in an inheritance

biological and cultural held in common with other participants and taking responsibility for that world is crucial for the meaning the ever increasing technological mediation of our lives undermines this worldliness we are subsequently losing our minds and as our mindedness fades so goes our sense of dignity and value madden makes this case deploying insights from phenomenology analytic philosophy aristotelianism neuroscience and cognitive science and along the way confronts the mind body problem freedom artificial intelligence transhumanism and nihilism more importantly he invites the reader into an accessible dialogue concerning issues of grave importance to the meaning of our lives

this book includes sections that provide a summary of the basic science underlying neurophysiological techniques a description of the techniques themselves including normal values and a description of the use of the techniques in clinical situations

a new theory of intelligence from a renowned and highly respected writer on brains and evolution what constitutes consciousness or intelligence this is a question that has proved to philosophers to be an intellectual dead end now william calvin by looking closely at animal and human intelligence and a wide range of evolutionary evidence has broken new ground that will help us understand mental illness and illuminate the whole notion of what it is to be a person calvin begins by asking what intelligence is he moves to the why of intelligence where evidence from chimpanzees is important before coming to the all important how of intelligence the cerebral codes and darwinian processes that operate within seconds to produce intelligent thought and action

first published in 1998 routledge is an imprint of taylor francis an informa company

five symposia from the 25th annual oberlin colloquium in philosophy focus on cognitive suicide the explanatory role of content cartesian error and the objectivity of perception social content and psychological content and belief attribution and context

includes the transactions of the 15th annual meetings of the american association of the history of medicine 1939

mendola spends little time distinguishing human thought from horse sense and any possible ruminations of other creatures nor does he acknowledge an distinction between conscious experience and thought content he develops a theory of content for human thought that delineates the things human can think constructs an account of the realization of such thought explains how thoughts with such a range of context might be constituted and how there might be people with such thoughts and argues that no coherent and humanly conceivable account of the realization of our thought is plausible because we cannot plausibly explain our experience he concludes that how we think we think what we think is not how we do in fact think we think annotation copyrighted by book news inc portland or
