for millennia the normal natural and pleasurable activity of eating has been surrounded by fear and anxiety religious traditions have long decreed what foods are right for their followers to eat but secularisation and scientific progress have not made the situation easier our present obsession with health obesity ethics and science has seemingly developed from a society that is over supplied with the necessities of life for the first time social historian stephen halliday looks at the history of our fascinating relationship with food from galen in the first century ad declaring that fruit was the worst kind of food to eat to john kellogg s belief that eating wholegrain cereals would prevent masturbation and bring people closer to god through modern fears and food scares such as mad cow disease to our current fascination with superfoods friendly bacteria and organic farming our troubles with food is a thorough analysis of our changing attitudes towards food and a reminder that we are not so very different from our forbears after all

the congressional record is the official record of the proceedings and debates of the united states congress it is published daily when congress is in session the congressional record began publication in 1873 debates for sessions prior to 1873 are recorded in the debates and proceedings in the congress of the united states 1789 1824 the register of debates in congress 1824 1837 and the congressional globe 1833 1873

examines the impact of the use of chemical additives to food on health and diet and discusses the poisons naturally present in foods

once patronized primarily by the counterculture and the health food establishment the organic food industry today is a multi billion dollar business driven by ever growing consumer demand for safe food and greater public awareness of ecological issues assumed by many to be a recent phenomenon that industry owes much to agricultural innovations that go back to the dust bowl era this book explores the roots and branches of alternative agricultural ideas in twentieth century america showing how ecological thought has challenged and changed agricultural theory practice and policy from the 1930s to the present it introduces us to the people and institutions who forged alternatives to industrialized agriculture

through a deep concern for the enduring fertility of the soil a passionate commitment to human health and a strong advocacy of economic justice for farmers randal beeman and james pritchard show that agricultural issues were central to the rise of the environmental movement in the united states as family farms failed during the depression a new kind of agriculture was championed based on the holistic approach taught by the emerging science of ecology ecology influenced the permanent agriculture movement that advocated such radical concepts as long term land use planning comprehensive soil conservation and organic farming then in the 1970s sustainable agriculture combined many of these ideas with new concerns about misguided technology and an over consumptive culture to preach a more sensible approach to farming in chronicling the overlooked history of alternative agriculture a green and permanent land records the significant contributions of individuals like rex tugwell hugh bennett louis bromfield edward faulkner russell and kate lord scott and helen nearing robert rodale wes jackson and groups like friends of the land and the practical farmers of iowa and by demonstrating how agriculture also remains central to the public interest especially in the face of climatic crises genetically altered crops and questionable uses of pesticides this book puts these issues in historical perspective and offers readers considerable food for thought
