these notes grew from my research in evolutionary biology specifically on the theory of evolutionarily stable strategies ess theory over the past ten years personally evolutionary game theory has given me the opportunity to transfer my enthusiasm for abstract mathematics to more practical pursuits i was fortunate to have entered this field in its infancy when many biologists recognized its potential but were not prepared to grant it general acceptance this is no longer the case ess theory is now a rapidly expanding in both applied and theoretical directions force that no evolutionary biologist can afford to ignore perhaps to continue the life cycle metaphor ess theory is now in its late adolescence and displays much of the optimism and exuberance of this exciting age there are dangers in writing a text about a theory at this stage of development a comprehensive treatment would involve too many loose ends for the reader to appreciate the central message on the other hand the current central message may soon become

obsolete as the theory matures although the restricted topics i have chosen for this text reflect my own research bias i am confident they will remain the theoretical basis of ess theory indeed i feel the adult maturity of ess theory is close at hand and i hope the text will play an important role in this achievement
