real world engineering problems often require concurrent optimization of several design objectives which are conflicting in cases this type of optimization is generally called multi objective or multi criterion optimization the area of research that applies evolutionary methodologies to multi objective optimization is of special and growing interest it brings a viable computational solution to many real world problems generally multi objective engineering problems do not have a straightforward optimal design these kinds of problems usually inspire several solutions of equal efficiency which achieve different trade offs decision makers preferences are normally used to select the most adequate design such

preferences may be dictated before or after the optimization takes place they may also be introduced interactively at different levels of the optimization process multi objective optimization methods can be subdivided into classical and evolutionary the classical methods usually aim at a single solution while the evolutionary methods provide a whole set of so called pareto optimal solutions evolutionary multi objective system design theory and applications provides a representation of the state of the art in evolutionary multi objective optimization research area and related new trends it reports many innovative designs yielded by the application of such optimization methods it also presents the application of multi objective optimization to the following problems embrittlement of stainless steel coated electrodes learning fuzzy rules from imbalanced datasets combining multi objective evolutionary algorithms with collective intelligence fuzzy gain scheduling control smart placement of roadside units in vehicular networks combining multi objective evolutionary algorithms with quasi simplex local search design of robust substitution boxes protein structure prediction problem core assignment for efficient network on chip based system design

this book critically engages with the concepts of small states and soft power and advances a new approach to defining small states a new conceptualisation of soft power and a method for empirically analysing the exercise of soft power it revisits the concepts of small states and soft power with a focus on bhutan and qatar and their approach to exercise soft power to achieve their foreign policy goals building on two main perspectives to define small states the objective approach and the subjective perspective this book offers an intersubjective approach to define states as small the intersubjective approach requires a shared understanding between states that a certain state is small the book further highlights the importance of deconstructing the meaning of size and to separate the notion of size from the concept of power because size is not always indicative of power it argues that although small states tend to have fewer material resources than large states they nevertheless can have influence through the exercise of soft power soft power is in this book defined as the ability of an actor to convince another actor that something is true convincing deals with the beliefs of an actor and is a mental decision rather than a physical action this book argues that the exercise of soft power can be analysed through examining the development projection and reception of identities the findings of this book show that bhutan was more successful than qatar in exercising soft power and explains the reasons for this variation aimed at a multidisciplinary audience this book will be of particular interest to practitioners scholars and students of international relations political power small states and area studies
