this book poses the question do we need a new body of regulations and the constitution of new regulatory agents to face the evolution of money in the fourth industrial revolution after the global financial crisis and the subsequent introduction of distributed ledger technologies in monetary matters multiple opinions claim that we are in the middle of a financial revolution that will eliminate the need for central banks and other financial institutions to form bonds of trust on our behalf in contrast to these arguments this book argues that we are not witnessing a revolutionary expression but an evolutionary one that we can trace back to the very origin of money accordingly the book provides academics regulators and policy makers with a multidisciplinary analysis that includes elements such as the relevance of intellectual property rights which are disregarded in the legal analysis of money furthermore the book proposes the idea that traditional analyses on the exercise of the *lex monetae* ignore the role of inside monies and technological infrastructures developed and supported by the private sector as exemplified in the evolution of the cryptoassets market and in cases such as *banco de portugal v waterlow sons* the book puts forward a proposal for the design and regulation of new payment systems and invites the reader to look beyond the dissemination of individual distributed ledger technologies such as bitcoin
