given the potentially traumatic and stressful nature of having childhood cancer results  
investigating the level of adjustment among children and adolescents with cancer have been quite  
surprising demonstrating levels of adjustment similar to the adaptation of children adolescents  
from the general population due to these findings studies in pediatric psychology have sought to  
identify the specific risk and resistance factors that may protect children and adolescents from  
adjustment problems the current study is the first empirical investigation to examine the  
combined impact of perceived stress and perceived social support on adjustment hypotheses for  
the present study were as follows 1 children and adolescents in the present study would  
demonstrate levels of adjustment similar to instrument norms 2 there would be significant  
differences between reports of adjustment from children adolescents and their parents 3  
significant direct effects would be demonstrated between perceived stress and adjustment 4  
significant direct effects would be demonstrated between perceived social support and adjustment  
and 5 there would be empirical support for mediating but not moderating effects of perceived  
social support in the relationship between perceived stress and adjustment subjects for the  
current study were 221 children and adolescents with cancer from children s hospital san diego  
children s hospital los angeles and children s hospital long beach children and adolescents in  
this study demonstrated levels of adjustment equal to or better than instrument norms and child  
but not adolescent reports of their adjustment demonstrated nonsignificant correlations with the  
reports of adjustment from their parents in addition although no mediating effects were  
demonstrated for perceived social support statistically and clinically significant direct  
effects were found for both perceived stress and perceived social support results from the  
present study may serve to guide future research investigating the risk and protective factors  
of adjustment in pediatric cancer in addition these findings may suggest effective interventions  
designed to reduce perceived stress i e relaxation and guided imagery and increase perceived

social support i e social skills training and school reintegration and have implications for studying resiliency in children and adolescents facing profound adversity

this study examines the sensitivity of surface layer windflow over gently rolling terrain to different stability conditions both with and without the effects of vegetation used to modify terrain heights and determine surface roughness the numerical model used produces simulations of surface layer windflow by using gauss s principle of least constraints to allow an initially uniform windfield to adjust to topography and buoyancy forces while conserving mass the model experiments used simulated meteorological data at only one observation point and detailed terrain and vegetation data on a 51 by 51 grid with 100 m spacing for an area covering 5 by 5 km over the fort polk military reservation in louisiana results show that the model simulates topographically induced flows such as cold air drainage and upslope flow despite the simple physics employed we also show that the presence to tall vegetation over the area mainly coniferous and deciduous trees alters the flow patterns under various stability conditions these effects are shown to be caused primarily by changes in the area of chemical transport and diffusion because they mean that even gently rolling terrain influences the surface windflow and that tall vegetation has a considerable influence as well

the failures in the elementary school are caused more frequently by arithmetic than by any other subject in the curriculum these failures can be traced to three factors 1 materials textbooks practice exercises special devices 2 the teacher s methods of instruction or manner of presentation 3 the methods and mental processes of the pupils this monograph reports a study of the third factor and presents a detailed analysis of one group of mental processes those exhibited in dealing with the four fundamental operations in arithmetic
