world renowned economist klaus schwab founder and executive chairman of the world economic forum explains that we have an opportunity to shape the fourth industrial revolution which will fundamentally alter how we live and work schwab argues that this revolution is different in scale scope and complexity from any that have come before characterized by a range of new technologies that are fusing the physical digital and biological worlds the developments are affecting all disciplines economies industries and governments and even challenging ideas about what it means to be human artificial intelligence is already all around us from supercomputers drones and virtual assistants to 3d printing dna sequencing smart thermostats wear able sensors and microchips smaller than a grain of sand but this is just the beginning nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3d printed liver are already in development imagine smart factories in which global systems of manufacturing are coordinated virtually or implantable mobile phones made of biosynthetic materials the fourth industrial revolution says schwab is more significant and its ramifications more profound than in any prior period of human history he outlines the key technologies driving this revolution and discusses the major impacts expected on government business civil society and individuals schwab also offers bold ideas on how to harness these changes and shape a better future one in which technology empowers people rather than replaces them progress serves society rather than disrupts it and in which innovators respect moral and ethical boundaries rather than cross them we all have the opportunity to contribute to developing new frameworks that advance progress

the fourth industrial revolution is changing everything from the way we relate to each other to the work we do the way our economies work and what it means to be human we cannot let the brave new world that technology is currently creating simply emerge all of us need to help shape the future we want to live in but what do we need to know and do to achieve this in shaping the fourth industrial revolution klaus schwab explores how people from all backgrounds and sectors can

influence the way that technology transforms our world drawing on contributions by more than 200 of the world's leading technology economic and sociological experts to present a practical guide for citizens business leaders social influencers and policy makers this book outlines the most important dynamics of the technology revolution highlights important stakeholders that are often overlooked in our discussion of the latest scientific breakthroughs and explores 12 different technology areas central to the future of humanity emerging technologies are not predetermined forces out of our control nor are they simple tools with known impacts and consequences the exciting capabilities provided by artificial intelligence distributed ledger systems and cryptocurrencies advanced materials and biotechnologies are already transforming society the actions we take today and those we don't will quickly become embedded in ever more powerful technologies that surround us and will very soon become an integral part of us by connecting the dots across a range of often misunderstood technologies and by exploring the practical steps that individuals businesses and governments can take shaping the fourth industrial revolution helps equip readers to shape a truly desirable future at a time of great uncertainty and change

revolutions finished and unfinished from primal to final is an important philosophical contribution to the study of revolution it not only makes new contributions to the study of particular revolutions but to developing a philosophy of revolution itself many of the contributors have been inspired by the philosophical approaches of eric voegelin or eugen rosenstock huessy and the tension between these two social philosophies adds to the philosophical uniqueness and richness of the work

master's thesis from the year 2020 in the subject business economics business management corporate governance grade 94 110 university of rome tor vergata language english abstract this thesis deals with big data as a key driver of change management and the importance of culture change in transformation processes it aims to answer the following questions what is the fourth industrial revolution's enabling technology that companies need to concentrate on extraction value in the phase of volatility and uncertainty how can companies use change management theories and practices to stay competitive and agile how do companies deal with the resistance to change what is the role of culture change throughout the research

the industry 4.0 as the background and central theme behind the study is examined change management and big data are explored broadly in primary academic sources this research contributes to the literature by providing a comprehensive picture of the essential determinants of successful change management that connects the gap between the different aspects raised in the literature the world is transforming every day customer needs are changing technology is advancing and the economy is evolving businesses who fail to embrace change can easily wind up as dinosaurs this study analyses decisive change drivers coming with industry 4.0 particularly big data the core to effectively proceeding industry 4.0 is to move from a traditional waterfall concept to an agile manner effective change management is crucial big data transformations require an innovative way of thinking about how change impacts people culture organisations processes and more while resistance is the normal human reaction in times of change culture change is critically essential to transformation and can mitigate much of the resistance digital transformation is not mainly about technology it is about agility organisations culture plays a decisive role in the digital transformation of every business

this edited collection is based on a series of articles written by Michael A. Peters as editor in chief of educational philosophy and theory to explore the concept of the Chinese Dream first introduced by President Xi in 2012 this seventh volume in the Editor's Choice series provides a philosophical and historical analysis of the Chinese Dream by analyzing its major intersecting narratives liberal Confucian and Marxist with chapters covering higher education strategy social governance socialist rule of law the US-China trade war technological unemployment and the emergence of the Chinese techno-state this volume also offers an introduction to Chinese philosophy and history and its narrative re-crafting that presents China as a global power the author calls this process and the emerging Chinese narratives educating the future

artificial intelligence (AI) is on everybody's minds these days most of the world's leading companies are making massive investments in it governments are scrambling to catch up every single one of us who uses Google Search or any of the new digital assistants on our smartphones has witnessed first hand how quickly these developments now go many analysts foresee truly disruptive changes in education employment health knowledge generation mobility etc but what will AI mean

for defense and security in a new study hcss offers a unique perspective on this question most studies to date quickly jump from ai to autonomous mostly weapon systems they anticipate future armed forces that mostly resemble today s armed forces engaging in fairly similar types of activities with a still primarily industrial kinetic capability bundle that would increasingly be ai augmented the authors of this study argue that ai may have a far more transformational impact on defense and security whereby new incarnations of armed force start doing different things in novel ways the report sketches a much broader option space within which defense and security organizations dsos may wish to invest in successive generations of ai technologies it suggests that some of the most promising investment opportunities to start generating the sustainable security effects that our polities societies and economies expect may lie in in the realms of prevention and resilience also in those areas any large scale application of ai will have to result from a preliminary open minded on all sides public debate on its legal ethical and privacy implications the authors submit however that such a debate would be more fruitful than the current heated discussions about killer drones or robots finally the study suggests that the advent of artificial super intelligence i e ai that is superior across the board to human intelligence which many experts now put firmly within the longer term planning horizons of our dsos presents us with unprecedented risks but also opportunities that we have to start to explore the report contains an overview of the role that intelligence the computational part of the ability to achieve goals in the world has played in defense and security throughout human history a primer on ai what it is where it comes from and where it stands today in both civilian and military contexts a discussion of the broad option space for dsos it opens up 12 illustrative use cases across that option space and a set of recommendations for especially small and medium sized defense and security organizations

peter ho former head of the singapore civil service was the institute of policy studies 2016 17 s r nathan fellow for the study of singapore this book collects the four ips nathan lectures that he delivered between april and may 2017 and gathers highlights of his dialogues with the audience ho surveys the increasingly complex world and suggests what governments can do to prepare for the future even as no one can predict it he uses metaphors such as the black elephant and concepts like the dialectic of governance to explain how a systematic approach to thinking about the future can help

countries in general and singapore in particular build resilience and develop a comparative advantage in the face of uncertainty and rapid change the ips nathan lectures series was launched in 2014 as part of the s r nathan fellowship for the study of singapore its primary goal is to promote public understanding and discourse of issues of critical national interest

this book investigates how women in africa are being impacted by the fourth industrial revolution which describes the twenty first century proliferation of mobile internet machine learning and artificial intelligence the move towards digitalization brings fundamental changes in the way people work live and generally relate to each other however in many areas of africa women face digital inclusion challenges and their lack of access to the internet limits their social political and economic participation in globalization this book considers the different policy approaches taken in african countries and their preparedness for enabling women s participation in the fourth industrial revolution across a range of sectors by discussing key topics such as artificial intelligence technological adaptation drones entrepreneurship education and financial inclusion the book identifies positive policy approaches to ensure equitable progress towards the fourth industrial revolution at all structural levels making a powerful case for the benefits of inclusive digital innovation this book will be of interest to researchers of women and technology in africa

a demographic futurist explains the coming super age when there will be more people older than sixty five than those under the age of eighteen and explores what it could mean for our collective future societies all over the world are getting older the result of the fact that we are living longer and having fewer children at some point in the near future much of the developed world will have at least twenty percent of their national populations over the age of sixty five bradley schurman calls this the super age today italy japan and germany have already reached the super age and another ten countries will

have gone over the tipping point in 2021 thirty five countries will be part of this club by the end of the decade this seismic shift in the world population can portend a period of tremendous growth or leave swaths of us behind schurman explains how changing demographics will affect government and business and touch all of our lives fewer people working and paying income taxes due to outdated employment and retirement practices could mean less money feeding popular programs such as social security and medicare with greater numbers relying on them the forced retirement or redundancy of older workers could impact business by creating a shortage of workers which would likely drive wages up and result in inflation corporations too must rethink marketing strategies older consumers are already purchasing the majority of new cars and they are a growing and vitally important market for health technologies and housing architects and designers must re create homes and communities that are more inclusive of people of all ages and abilities if we aren t prepared for the changes to come schurman warns we face economic stagnation increased isolation of at risk populations and accelerated decline of rural communities instead we can plan now to harness the benefits of the super age extended and healthier lives more generational cooperation at work and home and new markets and products to explore the choice is ours to make
