Dr. Anthony B. Miller has written what causes cancer what we know and what it means for a broad general audience but it is also intended for those who have already been diagnosed with cancer as well as for their families and friends. Dr. Miller's central premise is that a great deal more is known about the prevention of cancer than most of us realize. In most of the countries of the western world, cancer will affect one in three persons, although it is not yet possible to tell which of us is the one of those three. All will benefit by acting upon the knowledge presented herein. What causes cancer offers readers a clear and concise overview of the main types of cancer, summarizing data gathered over the history of cancer research from across the globe.

This textbook has been designed to meet the needs of B.Sc. second semester students of zoology as per the common minimum syllabus prescribed for all Uttarakhand state universities and colleges under the recommended national education policy 2020. The book has been presented in two parts, namely genetics and cell biology. The first part, genetics, discusses Mendel's laws of dominance, segregation, and independent assortment. Further, it elucidates linkages, crossing over, sex-linked inheritance, and mutation. The second part of the book delineates cell biology, discussing prokaryotic and eukaryotic cells, their structure and functions, cell organelles, and cell division, including the cell cycle, mitosis, and meiosis. This textbook contains a simple, comprehensive, up-to-date, and well-illustrated account of genetics and cell biology. Also, special care has been taken to maintain clarity and authenticity of text and illustrations.

Cancer risk factors include exposure to certain substances which may contribute to the development of cancer. However, substances can have different levels of cancer-causing potential, and the risk of developing cancer is dependent on several factors, including individual genetic background and the amount and

duration of the exposure this book focuses on various cancer risk factors covering numerous known probable and possible carcinogens their role in carcinogenesis mechanisms of carcinogenicity and methods for detecting carcinogens and due to the growing concerns over the effects that substances and environmental exposures can have on human health the chapters also emphasize on the vital need for further topic related research as well as development and implementation of beneficial approaches
