do you know that when you eat a food containing carbohydrates your body breaks it down to produce energy and do you know also that the impact a food will have on the blood sugar depends on many other factors yes those factor and their impacts are measured by what is called the glycemic index or gi for short which according to wikipedia is a measure of the rate at which a carbohydrate is broken down in your system and how it affects blood sugar levels alright glucose the defining standard here has a glycemic index of 100 but the effects that different foods have on blood glucose levels vary considerably from one person to the other however what we are saying here is that the glycemic index estimates how much each gram of available carbohydrate total carbohydrate minus fiber in a food raises a person s blood glucose level following consumption of the food relative to consumption of pure glucose with that said it then means if you are diabetic it is important that you acquaint
