subsequently the laboratory session has a stated purpose with clear instructions of expectations and learning objectives important terms are clearly indicated in boxes to stress to students that these must be understood this is then followed by a clear laboratory procedure for the student to follow this usually involves the identification of particular features of assigning specific tasks as identified in the various exercises finally as a means of stressing the applicability of what has been learned in the laboratory exercise the student will be requested to generate an evaluation of some aspect of the anatomy such as using a method for determining age at death from assigned specimens the student is then required to interpret this information and produce for the next class or session a laboratory research report guidelines for these reports are contained within this manual diagrams photographs have been provided for students to label these diagrams are meant to be a study guide instructors may wish to add anatomical features or de emphasize certain features accordingly

the author presents a guide to interpreting human remains the text covers why to study human remains from archaeological sites ethical concerns and human remains and the disposal and preservation of the dead then it delves into actual practice describing excavation processing conservation and curation the core chapters focus on recording and analyzing data considering in turn basic information palaeopathology and calling out the hard sciences a final chapter ponders the future of the dead

a two volume reference set that reflects the fundamental concepts and principles identified by the national committee on science education standards entries are arranged by topic or theme and cover concepts theories sub disciplines biographies common methods and techniques relevant to modern science
