highly readable profusely illustrated survey relates technology to history of every age food production metalworking mining steam power transportation electricity and much more 354 black and white illustrations 1961 edition

from the medieval farm implements used by the first colonists to the invisible links of the internet the history of technology in america is a history of society as well this title analyzes technology s impact on the lives of women and men it also discusses the innovation of an american system of manufactures

three emerging themes challenge the popular notion that technology advances through the efforts of a few who produce a series of revolutionary inventions that owe little or nothing to the technological past

this volume examines the connections between technological change and its knowledge base focusing in particular on europe during the industrial revolution

the technical problems confronting different societies and periods and the measures taken to solve them form the concern of this annual collection of essays volumes contain technical articles ranging widely in subject time and region as well as general papers on the history of technology in addition to dealing with the history of technical discovery and change history of technology also explores the relations of technology to other aspects of life social cultural and economic and shows how technological development has shaped and been shaped by the society in which it occurred

technology a world history offers a brilliant history of invention around the globe historian daniel r headrick ranges from the stone age and the beginnings of agriculture to the industrial revolution and the electronic revolution of the recent past in tracing the growing power of humans over nature through increasingly powerful innovations he compares the evolution of technology in different parts of the world providing a much broader account than is found in other histories of technology

history of technology it is the history of how humans developed various tools and techniques it is strongly related with history of humanity since humans are invented almost every invention let it be a tool technology or foundation of some natural resources before continuing to history of technology it is important to understand what technology actually is technology refers to set of multiple methods in order t perform a particular task it can be as simple as a language or stone tool and also as complex as genetic engineering and information technology emerging since late 80s technology enables to acquire new knowledge that is applied to emerge and create new things in one way or other it also helps in many scientific endeavors helped mankind to reach travel to places that were considered impossible to reach once it also involves the study of nature with superb details

which could be never possible without the use of multiple scientific instruments

humans are tool makers and the first record of humankind is that of their tools donald cardwell writes in this absorbing history of technology from prehistory to the present from stone implements the wheel and the first geared machines to the transistor and the supercomputer with a keen eye for the insight that marks a breakthrough in human problem solving and a wide ranging sympathy for its social and cultural contexts cardwell chronicles how human curiosity and inventiveness slowly led to the first tools and machines how technological progress accelerated over time as major breakthroughs released floods of further inventions the close links between pure science and technology and the human factors personal and social that help or hinder technological change casting fresh light on every aspect of technology cardwell also challenges us to consider such issues as the influence on technology of different religions and cultural practices including a society's level of political freedom the role of market forces the comparative technological advantages of nations as disparate as japan and the united states and the potential that women hold as the greatest remaining untapped resource for invention and innovation as accessible and engaging as it is informative this book will reward anyone curious about the tools humanity has devised to transform its place in the world

the annual collections in the history of technology series look at the history of technological discovery and change exploring the relationship of technology to other aspects of life and showing how technological development is affected by the society in which it occurred

with e jaffe r h g thomson and j m donaldson in eight volumes volume 1 from early times to the fall of ancient empires volume 2 the mediterranean civilizations and the middle ages ca 700 b c to a d 1500 volume 3 from the renaissance to the industrial revolution 1500 1750 volume 4 the industrial revolution 1750 1850 volume 5 the late nineteenth century 1850 1900 volume 6 7 the twentieth century 1900 1950 volume 8 consolidated indexes

this volume showcases the valuable achievements of the romanian technology and industry worldwide it started from the premise that the history of romanian technique is scarcely known outside the borders of romania the main romanian contributions to the world's technological heritage are missing except for a few names in the field of aviation from the great encyclopedias and dictionaries published worldwide this is due among other reasons to the insufficient promotion in widely spoken languages of the history of romanian technology the multidisciplinary approach of the volumes means that the field of technology had to be split into several branches the present volume includes the following industries mining

metallurgy oil natural gas machine building agricultural machinery military textiles and construction folk technology the formation of the industrial system and mechanics are tackled in separate chapters for each field are engaged the collaboration of authors who have already published a history of their field certain chapters were drafted with the aid of specialists who have played the part of policy makers in the elaboration of development strategies for romania and who are familiar not only with the facts and the history of their field but also with the philosophy behind its development

technological change gathers together examples of the best current thinking on methodology and the theoretical perspectives that are increasingly of concern to historians of technology whilst at the same time presenting other papers which reflect the state of the art in key areas of historical debate the volume emphasises the need both to establish a common forum for theoretical and empirical research and also to delineate the shared concerns of these two treatments which are too often reflected as conflicting rather than mutually supportive approaches to the writing of the history of technology

arguably the best general history of science and technology ever published tracing the relationship between science and technology from the dawn of civilization to the early twenty first century james e mcclellan iii and harold dorn s bestselling book argues that technology as applied science emerged relatively recently as industry and governments began funding scientific research that would lead directly to new or improved technologies mcclellan and dorn identify two great scientific traditions the useful sciences which societies patronized from time immemorial and the exploration of questions about nature itself which the ancient greeks originated the authors examine scientific traditions that took root in china india and central and south america as well as in a series of near eastern empires in late antiquity and the middle ages from this comparative perspective mcclellan and dorn survey the rise of the west the scientific revolution of the seventeenth century the industrial revolution and the modern marriage of science and technology they trace the development of world science and technology today while raising provocative questions about the sustainability of industrial civilization this new edition of science and technology in world history offers an enlarged thematic introduction and significantly extends its treatment of industrial civilization and the technological supersystem built on the modern electrical grid the internet and social media receive increased attention facts and figures have been thoroughly updated and the work includes a comprehensive guide to resources incorporating the major published literature along with a vetted list of websites and internet resources for students and lay readers

the technical problems confronting different societies and periods and the measures taken to solve them form the concern of this annual collection of essays volumes contain technical articles ranging widely in subject time and region as well as general papers on the history of technology in addition to dealing with the history of technical discovery and change history of technology also explores the relations of technology to other aspects of life social cultural and economic and shows how technological development has shaped and been shaped by the society in which it occurred
