in recent decades there has been extensive research on greek mathematics that has considerably enlarged the scope of this area of inquiry traditionally greek mathematics has referred to the axiomatic work of archimedes apollonius and others in the first three centuries bce however there is a wide body of mathematical work that appeared in the eastern mediterranean during the time it was under greek influence from approximately 400 bce to 600 ce which remains under explored in the existing scholarship this sourcebook provides an updated look at greek mathematics bringing together classic greek texts with material from lesser known authors as well as newly uncovered texts that have been omitted in previous scholarship the book adopts a broad scope in defining mathematical practice and as such includes fields such as music optics and architecture it includes important sources written in languages other than greek in the eastern mediterranean area during the period from 400 bce to 600 ce which show some influence from greek culture it also includes passages that highlight the important role mathematics played in philosophy pedagogy and popular culture the book is organized topically chapters include arithmetic plane geometry astronomy and philosophy literature and education within each chapter the translated texts are organized chronologically the book weaves together ancient commentary on classic greek works with the works themselves to show how the understanding of mathematical ideas changed over the centuries

in this book flora levin explores how and why music was so important to the ancient greeks she examines the distinctions that they drew between the theory of music as an art ruled by number and the theory wherein number is held to be ruled by the

art of music these perspectives generated more expansive theories particularly the idea that the cosmos is a mirror image of music's structural elements and conversely that music by virtue of its cosmic elements time motion and the continuum is itself a mirror image of the cosmos these opposing perspectives gave rise to two opposing schools of thought the pythagorean and the aristoxenian levin argues that the clash between these two schools could never be reconciled because the inherent conflict arises from two different worlds of mathematics her book shows how the greeks appreciation of the profundity of music's interconnections with philosophy mathematics and logic led to groundbreaking intellectual achievements that no civilization has ever matched
