a timely and smart discussion of how different cities and regions have made a changing economy work for them and how policymakers can learn from that barack obama we're used to thinking of the united states in opposing terms red versus blue haves versus have nots but today there are three americas at one extreme are the brain hubs cities like san francisco boston and durham with workers who are among the most productive creative and best paid on the planet at the other extreme are former manufacturing capitals which are rapidly losing jobs and residents the rest of america could go either way for the past thirty years the three americas have been growing apart at an accelerating rate this divergence is one of the most important developments in the history of the united states but the winners and losers aren't necessarily who you'd expect enrico moretti's groundbreaking research shows that you don't have to be a scientist or an engineer to thrive in one of the brain hubs taxi drivers teachers nurses and other local service jobs are created at a ratio of five to one in the brain hubs raising salaries and standard of living for all dealing with this split supporting growth in the hubs while arresting the decline elsewhere is the challenge of the century and the new geography of jobs lights the way brilliant forbes mr moretti says the data support the argument that technology innovators are one of the most important engines of job creation in the us jessica e vascellaro wall street journal excellent the national review a clear and insightful account of the economic forces that are shaping america the new republic

in this engaging book john gillies explores shakespeare's geographic imagination and discovers an intimate relationship between renaissance geography and theatre arising from their shared dependence on the opposing impulses of taboo laden closure and hubristic expansiveness dr gillies shows that shakespeare's images of the exotic the barbarous outlandish or strange are grounded in concrete historical fact to be marginalised was not just a matter of social status but of belonging quite literally to the margins of contemporary maps through an examination of the icons and emblems of contemporary cartography dr gillies challenges the map makers overt intentions and the attitudes and assumptions that remained below the level of consciousness his study of map and metaphor raises profound questions about the nature of a map and of the connections between the semiology of a map and that of the theatre

geography is a wide ranging discipline and the number of information sources available is truly enormous these include printed books and journal articles maps satellite photographs archives statistical information and much else one particular problem facing geographers is that when one studies a foreign country information may be available only in the foreign country and difficult to obtain this book discusses the information sources available to geographers

this book provides a practical guide for students and practising teachers as to how concepts can form the basis of geography teaching this is particularly important at this time as the revised national curriculum for geography which takes effect from september 2008 has greatly reduced the prescribed content to be covered and instead emphasises that geography is underpinned by a small number of key concepts that provide the building blocks for curriculum planning the new national curriculum for geography identifies 7 concepts place space scale interdependence physical and human processes environmental interaction and sustainable development and cultural understanding and diversity and theses areas are reflected in the book s table of contents this focus on concepts represents a significant shift in how geography is to be taught in schools yet there has been little extended discussion of what a concept led approach to teaching and learning would entail this book will provide geography teachers with a theoretically robust and practical approach to curriculum planning based on the concepts that underpin the subject

international encyclopedia of human geography second edition fourteen volume set embraces diversity by design and captures the ways in which humans share places and view differences based on gender race nationality location and other factors in other words the things that make people and places different questions of for example politics economics race relations and migration are introduced and discussed through a geographical lens this updated edition will assist readers in their research by providing factual information historical perspectives theoretical approaches reviews of literature and provocative topical discussions that will stimulate creative thinking presents the most up to date and comprehensive coverage on the topic of human geography contains extensive scope and depth of coverage emphasizes how geographers interact with understand and contribute to problem solving in the contemporary world places an emphasis on how geography is relevant in a social and interdisciplinary context

this book demonstrates the benefits of applying a new interdisciplinary approach that combines global change and human mobility the term globility was coined in the year 2000 when the commission with the same name was created by the international geographical union with the purpose of theorizing about and asserting the concept of human mobility first the book offers theoretical reviews of human mobility then it proceeds to study patterns of mobility in today s world as it faces new challenges in migration policies including border controls management of refugee movements social initiatives to empower unauthorized immigrants the integration issue environmental hazards and so on the response to these diverse challenges reveals an increasing fluidity of human mobility and new forms of engagement of people on the move readers will obtain a better understanding of current human mobility from a large number of regions and from different thematic perspectives
